This report describes changes to the Fund that occurred during the reporting period.

What were the Fund costs for the last year?

(Based on a hypothetical \$10,000 investment)

	Costs of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Class S	\$86	0.83%

Gross expense ratio as of the latest prospectus: 0.77%. See prospectus for any contractual or voluntary waivers; without a waiver, costs would have been higher.

How did the Fund perform last year and what affected its performance?

Class S shares of the Fund returned 8.18% for the period ended October 31, 2025. The Fund's broad-based index, the Bloomberg Global Aggregate Index, returned 5.69% for the same period, while the Fund's additional, more narrowly based index, the ICE BofA Non-Financial Developed Markets High Yield Constrained (Hedged) Index, returned 7.97%.

The Fund's performance relative to the ICE BofA Non-Financial Developed Markets High Yield Constrained (Hedged) Index was helped by security selection in the BB, B and CCC ratings categories. On the other hand, an underweight in the outperforming BB category detracted.

Sector allocation contributed to the Fund's performance, largely due to overweights in the metals and mining, pharmaceutical, and wireless industries. Underweights in the outperforming health care, consumer cyclical and media/entertainment industries detracted from the Fund's performance. Security selection also helped relative performance, with the best results occurring in the midstream energy, pharmaceutical, and wireless industries. Selection in media/entertainment and building materials detracted.

An underweight in the energy infrastructure company New Fortress Energy* was a top contributor at the individual security level. The bonds weakened on concerns that ongoing financial strains and project delays could cause the company to consider options for restructuring. The Fund also benefited from an overweight in the secured bonds of the French telecommunications company Altice France through holdings in the issuing entities Altice Financing SA (0.4%) and Altice France SA (1.2%). Altice emerged from its bankruptcy proceedings with a leaner capital structure, and a series of bidders surfaced for the struggling company. An overweight in the pharmaceutical producer Teva Pharmaceutical, whose bonds are issued by the entity Finance Netherlands III BV (0.6%), further aided performance. The bonds benefited from the company's continued operational improvement, deleveraging, and strong free cash flow.

An overweight in the bonds of the commodity chemical manufacturer Tronox, Inc. (0.1%) was a notable detractor. The company reduced full year earnings and free cash flow guidance, and it received a credit downgrade due to its continued operational challenges. Underweights in Warnermedia Holdings, Inc. (0.5%), Discovery Communications LLC (0.5%) and iHeartCommunications* detracted from the Fund's performance, as well.

Percentages in parentheses are based on the Fund's net assets as of October 31, 2025.

Fund Performance

Cumulative Growth of an Assumed \$10,000 Investment

Bloomberg Global Aggregate Index is a flagship measure of global investment grade debt from local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers.

The Bloomberg Global Aggregate Index is a required broad-based index that represents the fund's overall debt market.

ICE BofA Non-Financial Developed Markets High Yield Constrained (Hedged) Index contains all securities in the ICE BofA Global High Yield Index that are non-financials and from developed markets countries, but caps issuer exposure at 2%. The index is hedged 100% to the USD by selling each foreign currency forward at the one-month forward weight.

The ICE BofA Non-Financial Developed Markets High Yield Constrained (Hedged) Index is a more narrowly based index that reflects the market sector in which the fund invests.

Index returns do not reflect any fees or expenses and it is not possible to invest directly into an index.

The quality ratings represent the highest of Moody's Investors Service, Inc. ("Moody's"), Fitch Ratings, Inc. ("Fitch") or S&P Global Ratings ("S&P") credit ratings. The ratings of Moody's, Fitch and S&P represent their opinions as to the quality of the securities they rate. Credit quality measures a bond issuer's ability to repay interest and principal in a timely manner. Ratings are relative and subjective and are not absolute standards of quality. Credit quality does not remove market risk and is subject to change.

Bond investments are subject to interest-rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Credit risk refers to the ability of an issuer to make timely payments of principal and interest. Investments in lower-quality (“junk bonds”) and non-rated securities present greater risk of loss than investments in higher-quality securities. Investing in foreign securities presents certain risks, such as currency fluctuations, political and economic changes, and market risks. Emerging markets tend to be more volatile and less liquid than the markets of more mature economies, and generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. The Fund may lend securities to approved institutions. Please read the prospectus for details.
