

DWS Global Macro Fund

Q4 | 12.31.25

Share Class: A | DBISX C | DBICX S | DBIVX INST | MGINX R6 | DBIWX

Objective

The fund seeks to achieve total return.

Strategy

The fund employs an active and flexible approach without benchmark constraints. Using a combination of top-down and bottom-up research, the fund aims to gain exposure to a broad range of securities across asset classes (global equities, global bonds, currencies, cash, etc.) with varying degrees of risk and return potential. All returns, rankings and ratings prior to 5/8/17 were achieved with a different objective, strategy and portfolio management.

Expense ratio (as of latest prospectus)

Class	Net	Gross	Contractual Waiver
A	1.12%	1.31%	02/28/2027
C	1.87%	2.10%	02/28/2027
S	0.87%	1.07%	02/28/2027
INST	0.87%	0.91%	02/28/2027
R6	0.87%	1.01%	02/28/2027

Without a waiver, returns would have been lower and any rankings/ratings might have been less favorable.

Performance is historical and does not guarantee future results. Investment returns and principal fluctuate so your shares may be worth more or less when redeemed. Current performance may be lower or higher than the performance data quoted. Please visit www.dws.com for the fund's most recent month-end performance. Performance includes reinvestment of all distributions. Index returns assume reinvestment of all distributions and do not reflect fees or expenses. It is not possible to invest directly in an index. Not all share classes are available to all investors. A minimum investment of \$1 million is required to open an account for Institutional shares. Adjusted Class C returns for periods of less than one year (e.g., YTD) reflect the Class C deferred sales charge of 1.00%. Adjusted Class C one-year returns do not reflect the effect of the 1.00% deferred sales charge and would be lower if an investor redeemed at the end of the one-year period and the deferred sales charge was applied.

¹ The MSCI ACWI All Cap Index captures large-, mid-, small- and micro-cap representation across Developed Markets countries and large-, mid- and small-cap representation across Emerging Markets countries. The index is comprehensive, covering approximately 99% of the global equity investment opportunity set.

² The Bloomberg Global Aggregate Index is a flagship measure of global investment grade debt from local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers.

³ The ICE BofA 3-Month US Treasury Bill Index tracks the performance of the U.S. dollar denominated U.S. Treasury Bills publicly issued in the U.S. domestic market with a remaining term to final maturity of less than three months.

⁴ Standard deviation is a three-year statistical measure of the volatility of a fund's returns. Generally, the greater the standard deviation, the greater the fund's volatility. Turnover rate is the rate of trading activity in a fund's portfolio of investments, equal to the lesser of purchases or sales, for a year, divided by average total assets for that year. ⁵Source: Morningstar, Inc. as of 11/30/2025.

War, terrorism, sanctions, economic uncertainty, trade disputes, public health crises and related geopolitical events have led and, in the future, may lead to significant disruptions in U.S. and world economies and markets, which may lead to increased market volatility and may have significant adverse effects on the fund and its investments.

Fund risk: Stocks may decline in value. Investing in foreign securities presents certain risks, such as currency fluctuations, political and economic changes, and market risks. Emerging markets tend to be more volatile and less liquid than the markets of more mature economies, and generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. The fund's use of forward currency contracts may not be successful in hedging currency exchange rates changes and could eliminate some or all of the benefit of an increase in the value of a foreign currency versus the U.S. dollar. Although allocation among different asset categories generally limits risk, fund management may favor an asset category that underperforms other assets or markets as a whole. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increased volatility. Investments in lower-quality ("junk bonds") and non-rated securities present greater risk of loss than investments in higher-quality securities. The fund may lend securities to approved institutions.
