What were the Fund costs for the last year?

(Based on a hypothetical \$10,000 investment)

	Costs of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Class R6	\$117	1.10%

Gross expense ratio as of the latest prospectus: 1.07%. See prospectus for any contractual or voluntary waivers; without a waiver, costs would have been higher.

How did the Fund perform last year and what affected its performance?

Class R6 shares of the Fund returned 12.19% for the period ended October 31, 2025. The Fund's broad-based index, the MSCI ACWI Index, returned 22.64% for the same period, while the Fund's additional, more narrowly based index, the S&P® Developed SmallCap Index, returned 15.65%.

The Fund's underperformance relative to the S&P® Developed SmallCap Index was primarily the result of stock selection in the financials, consumer discretionary, and real estate sectors. On the other hand, selection in industrials, communication services, and health care contributed positively.

The information technology stock Lumentum Holdings, Inc. (2.6%), a designer and manufacturer of optical and photonic products for cloud data centers, AI infrastructure, and industrial applications, was the top contributor at the individual company level. The stock surged behind strong earnings, robust demand from cloud and AI customers, and expanding profit margins. BridgeBio Pharma, Inc. (2.3%), which develops and commercializes medicines for genetic diseases and cancers, was a top performer in health care due to the successful launch of a new drug and a number of analyst upgrades. DroneShield Ltd.,* a provider of AI-powered counter-drone and electronic warfare solutions, further helped results. The shares rallied on the strength of contract wins and impressive revenue growth. The Italy-based cement producer Buzzi SpA (1.4%) and the satellite communications company EchoStar Corp. (0.6%) were additional contributors of note.

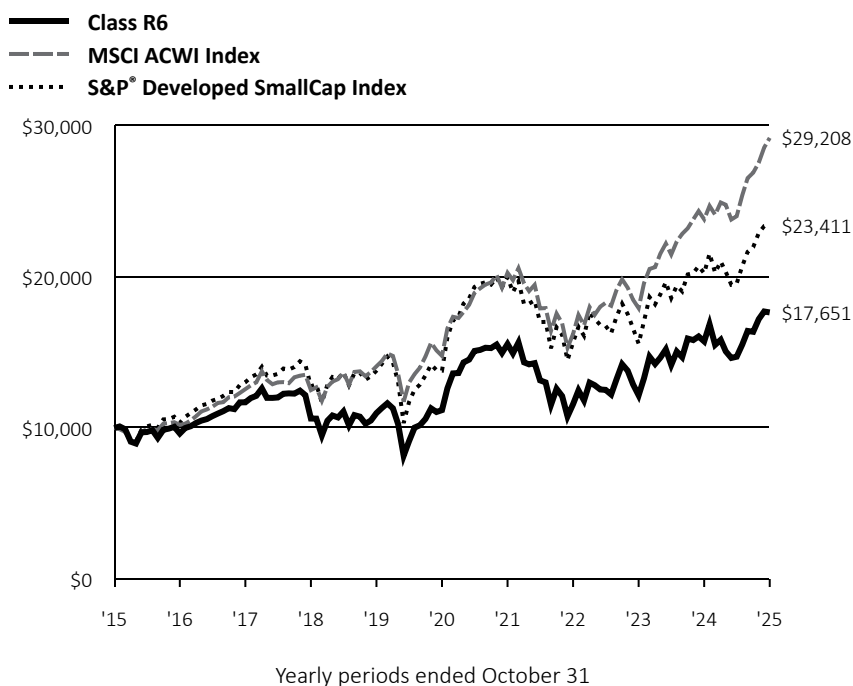

Modine Manufacturing Co.,* a producer of thermal management solutions, was the largest detractor. The stock declined due to weaker-than-expected sales, mixed guidance, and concerns about growth in its data center cooling segment. Stride, Inc. (0.8%) a technology-based education company providing online and blended learning programs for K-12 students and adult learners, also hurt performance. The stock plunged after the company issued sharply lower guidance, citing major IT platform issues that led to missed enrollments and higher withdrawal rates. Shares of Siegfried Holding AG (1.0%), a leading pharmaceutical contract development and manufacturing organization, declined due to cautious guidance and margin pressure. The U.K. bakery chain Greggs PLC (0.7%) and the US insulation producer Aspen Aerogels, Inc. (0.5%) were additional detractors of note.

Percentages in parentheses are based on the Fund's net assets as of October 31, 2025.

Fund Performance

Cumulative Growth of an Assumed \$10,000 Investment

MSCI ACWI captures large and mid-cap representation across Developed Markets and Emerging Markets countries. The index covers approximately 85% of the global investable equity opportunity set.

The MSCI ACWI is a required broad-based index that represents the fund's overall equity market.

S&P[®] Developed SmallCap Index comprises the stocks representing the lowest 15% of float-adjusted market cap in each developed country.

The S&P[®] Developed SmallCap Index is a more narrowly based index that reflects the market sector in which the fund invests.

Index returns do not reflect any fees or expenses and it is not possible to invest directly into an index.

Stocks may decline in value. Small company stocks tend to be more volatile than medium-sized or large company stocks. Investing in foreign securities presents certain risks, such as currency fluctuations, political and economic changes, and market risks. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. Emerging markets tend to be more volatile and less liquid than the markets of more mature economies, and generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. The impact of the use of quantitative models and the analysis of specific metrics on a stock's performance can be difficult to predict, and stocks that previously possessed certain desirable quantitative characteristics may not continue to demonstrate those same characteristics in the future. Quantitative models also entail the risk that the models themselves may be limited or incorrect. The Fund may lend securities to approved institutions. Please read the prospectus for details.
