STATEMENT ON PRINCIPAL ADVERSE IMPACTS OF INVESTMENT DECISIONS ON SUSTAINABILITY FACTORS

DWS International GmbH

30.06.2025

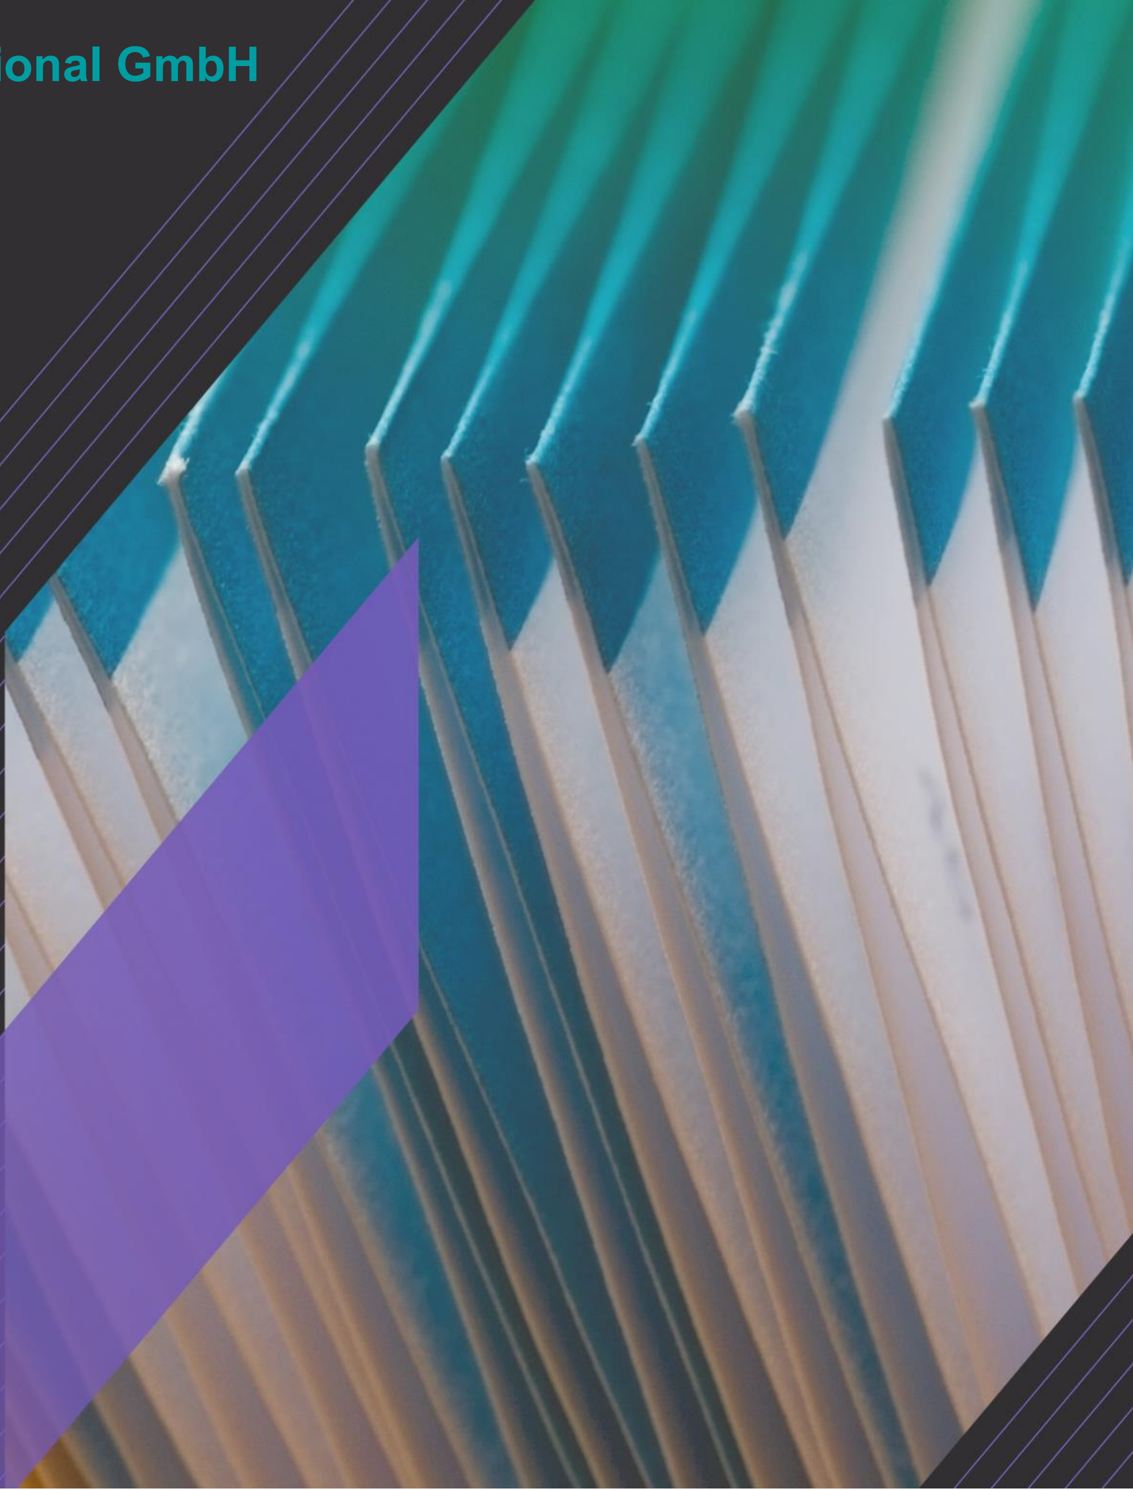

Table of Contents

A / Summary

DWS International GmbH (LEI code 549300TPJCLC0OHGM008) – DWS – a member of DWS Group[1], considers principal adverse impacts of its investment decisions on sustainability factors. The present statement is the consolidated statement on principal adverse impacts on sustainability factors of DWS International GmbH.

This statement on principal adverse impacts on sustainability factors covers the reference period from 1 January to 31 December 2024.

Sustainability factors are defined in the Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("Disclosure Regulation") as environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters. Principal adverse impacts mean negative impacts of investment decisions on those sustainability factors.

With this statement, DWS discloses – in line with the Delegated Regulation (EU) 2022/1288 to the Disclosure Regulation ("Delegated Regulation") – the principal adverse impacts of its investment decisions in investee companies, and sovereigns and supranational organizations, as well as information on their identification and prioritisation along actions taken during the aforementioned reference period and actions planned for the subsequent reference period to avoid or reduce the principal adverse impacts identified.

DWS measures principal adverse impacts via the following indicators as defined by the Delegated Regulation:

- 14 mandatory principal adverse impact indicators applicable to investments in investee companies
- 2 mandatory principal adverse impact indicators applicable to investments in sovereigns and supranationals
- 2 additional principal adverse impact indicators applicable to investments in investee companies, namely 'Investments in companies without carbon emission reduction initiatives' and the 'Number of identified cases of severe human rights issues and incidents'

The disclosed impacts as well as actions taken and planned refer to the following financial products in scope of the Disclosure Regulation (namely portfolio management mandates[2]) as applicable based on their underlying investment policy:

- Actively managed portfolio management mandates encompassing delegated fund management (for UCITS[3] and AIFs[4]) and managed account set-ups – the "Actively Managed Portfolio Business" spanning all major asset classes including equity, fixed income, cash, and alternative investments in form of tradable investments;
- Passively managed portfolio management mandates encompassing delegated fund management (for AIFs) and managed account set-ups – the "Passively Managed Portfolio Business" spanning all major asset classes.

DWS considers, i.e., identifies, prioritises, and addresses principal adverse impact indicators through the overall sustainability strategy and commitments of DWS Group. Those aspects together with regulatory requirements and market

[1] DWS Group means DWS Group GmbH & Co. KGaA and its subsidiaries consisting of any companies of which DWS Group GmbH & Co. KGaA is the direct or indirect parent company with majority participations (equity or voting capital share of more than 50%), including branches and representative offices.
[2] Portfolio management (as defined in the Directive 2014/65/EU on Markets in Financial Instruments as amended from time to time) managing portfolios in accordance with mandates given by clients on a discretionary client-by-client basis where such portfolios include one or more financial instruments.
[3] UCITS means Undertakings for Collective Investment in Transferable Securities according to the Directive 2009/65/EC on the coordination of laws, regulations and administrative provisions relating to Undertakings for Collective Investment in Transferable Securities (UCITS) as amended from time to time.
[4] Alternative Investment Funds according to the Directive 2011/61/EU on Alternative Investment Fund Managers as amended from time to time.

developments set strategic priorities which are implemented through policies and frameworks for DWS's financial products.

In specific, DWS considers principal adverse impacts of investment decisions via (1) its product range strategy, (2) DWS Group policies, (3) exclusion practices on portfolio or index level, and (4) stewardship activities. To what extent those measures are applicable to DWS's financial products depends on the respective financial product's investment strategy or consent of third parties (e.g., clients). Regarding (4), DWS acts as an active owner by exercising voting rights on behalf of its clients and by engaging in a dialogue with investee companies on various sustainability-related topics, such as the reduction of greenhouse gas emissions and human rights.[5]

Products for which DWS has outsourced the portfolio management to an external third party are included in the principal adverse impacts data disclosed for the aforementioned reference period. However, the consideration of principal adverse impacts for such products may also reflect the perspectives and management practices of the external portfolio manager.

The consideration of principal adverse impacts in the investment process is supported by the availability of data on adverse impacts attributed to existing and planned investments. To determine the principal adverse impacts of its investments in listed corporate issuers as well as in sovereigns and supranationals, DWS uses data from multiple data vendors, public sources and/or DWS internal assessments and research. Data quality is supported by selecting several data, as discrepancies can be identified at an early stage by comparing the data of the various vendors.

By comparing the principal adverse impacts across reporting periods, variations, both upwards and downwards, can be observed. These movements have been driven primarily by methodology changes for measuring impacts, changes in principal adverse impacts of the portfolio companies or investments, increased data coverage, and shifts in the investment allocation of the products. Such factors limit the comparability of data across reporting periods. Further monitoring of changes in principal adverse impacts over time is required to assess their consistency and relevance.

Overall, as fiduciary, it is of the utmost importance for DWS to make investment decisions in the best interest of its clients, considering material risks and the product specific investment policy. Principal adverse impacts will thus not automatically outweigh other relevant factors, especially for financial products managed specifically for individual clients.

[5] A pooled voting rights agreement is in place between DWS Group's largest management companies in Europe – DWS Investment GmbH, DWS Investment S.A., and for specific portfolio management mandates of DWS International GmbH where voting rights have been delegated by the client – and executed by DWS Investment GmbH. These entities also pool their engagement activities, executed by DWS Investment GmbH.

B / Description of the principal adverse impacts on sustainability factors

Indicators applicable to investee companies							
Adverse sustainability indicators		**Metric**	**Impact 2024**[6]	**Impact 2023**[7]	**Impact 2022**[8]	**Explanation**	**Actions taken, and actions planned, and targets set for next reference period**
CLIMATE AND OTHER ENVIRONMENT RELATED INDICATORS							
Greenhouse gas (GHG) emissions	1. GHG emissions	Scope 1 GHG emissions	2.907.640,77 [tCO2e]	2.824.118,18 [tCO2e]	2.889.738,04 [tCO2e] [9]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments[10]) for which data was available (2024: 73,27% / 2023: 60,04% / 2022: 58,80% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available	**General Framework:** **Targets**: DWS Group is committed to become climate-neutral in its actions well ahead of 2050. To this end, DWS Group published a net zero roadmap including interim carbon reduction targets for 2030 (for details see Section E.4. 'Standards and initiatives on climate change'). DWS has given its approval to this commitment and contributes a fair share towards the achievement of the DWS Group-level target. **Actions taken**: In 2023, DWS Group rolled out its Coal Policy applicable to products under unilateral

[6] The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. They are further based on products where DWS is acting as management company, where DWS delegates portfolio management to third parties, or where third parties delegate portfolio management to DWS. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology will typically exclude such securities or issuers from the calculation. For target fund investments, a "look-through" into target fund holdings may be performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAIIs follows DWS's current interpretation of the regulatory requirements and may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications. The figures presented in this statement do not include PAIs in relation to specific instrument types, such as derivative instruments.

[7] Please see footnote no.6.

[8] Please see footnote no.6.

[9] Tonnes of carbon dioxide equivalent

[10] "All investments" means the current value of all investments which are included in the calculation of the figures presented in this statement, subject to the limitations stated in footnote no.6.

						were excluded from the calculation.	DWS control[11]. With this policy, DWS takes actions that are designed to reduce its investments in and funding of coal-related activities. In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Exclusions:** **Actions taken**: Exclusions with regard to GHG emissions are applied in line with the individual investment policy of the product or mandate. Several products for institutional clients apply customized ESG screens in which carbon emissions are an important component of the ESG parameters. In addition, products in scope of DWS Group's Coal Policy[12] no longer make new investments in companies that are coal developers or have a coal
		Scope 2 GHG emssions	757.237,50 [tCO2e]	713.644,14 [tCO2e]	757.112,33 [tCO2e]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,27% / 2023: 60,04% / 2022: 58,80% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		Scope 3 GHG emissions	30.085.945,11 [tCO2e]	25.587.734,57 [tCO2e]	22.178.412,93 [tCO2e]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,23% / 2023: 59,83% / 2022: 58,59% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	

[11] Available here for additional information. Exceptions: physically replicating Passive funds, existing funds issued by the Illiquid Business. For products not under unilateral DWS control, implementation is subject to approval from third parties (clients, cooperation partners, US fund boards).
[12] Please see footnote no.11.

						The data vendor improved their scope 3 estimation model in 2023 and 2024.	share of revenues greater than 25%, and will divest from existing holdings in such companies. **Index selection:**
		Total GHG emissions	33.750.823,37 [tCO2e]	29.125.496,89 [tCO2e]	25.825.263,30 [tCO2e]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,27% / 2023: 60,04% / 2022: 58,80% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	**Actions taken**: Various products managed under the Passively Managed Portfolio Business are tracking reference indices which incorporate criteria to reduce exposure to or to exclude securities with certain negative climate impacts. This may include index-level rules such as carbon intensity reductions and exclusion of investee companies breaching revenue thresholds from controversial activities including thermal coal, unconventional oil and gas extraction, and oil sands extraction. **Actions planned**: DWS is aiming to maintain or increase the number of such products in 2025, which may depend on factors such as demand, market dynamics, market standards, and index availability.
	2. Carbon Footprint	Carbon footprint	317,39 [tCO2e / million EUR]	366,99 [tCO2e / million EUR]	387,72 [tCO2e / million EUR]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,27% / 2023: 60,04% / 2022: 58,80% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	**Engagement:** **Actions taken**: In support of DWS Group's net zero ambition, DWS[13] sent an engagement letter to 30 companies with high contributions to the weighted average carbon intensity (WACI) of the Actively and Passively Managed Portfolio Business. In this letter, DWS set out its expectations, informed the companies of its voting strategy and requested transparency and detailed information around their net zero strategies. In addition, DWS conducted follow-up engagements with many issuers which DWS had engaged with in 2023.

[13] A pooled voting rights agreement is in place between DWS Group's largest management companies in Europe - DWS Investment GmbH, DWS Investment S.A., and for specific portfolio management mandates of DWS International GmbH – and executed by DWS Investment GmbH. These entities also pool their engagement activities, executed by DWS Investment GmbH.

	3. GHG intensity of investee companies	GHG intensity of investee companies	746,77 [tCO2e / million EUR]	770,22 [tCO2e / million EUR]	928,65 [tCO2e / million EUR]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 74,00% / 2023: 68,43% / 2022: 58,80% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	**Actions planned**: DWS[14] plans to continue engagements with companies from high-emitting sectors taking into account the regional and sectoral context of these companies. **Proxy voting** [15]**:** **Actions taken**: In the Actively and Passively Managed Portfolio Business, DWS expects the boards and the management of investee companies to assess risks and impacts arising from or associated with environmental developments. DWS evaluates shareholder proposals on a case-by-case basis guided by the principles outlined in the DWS Corporate Governance & Proxy Voting Policy[16]. DWS may support shareholder proposals that ask a company to establish formal climate oversight, disclose GHG emissions and targets, establish a climate transition plan and report on its progress and implement measures to mitigate climate risks.
	4. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	12,48 [%]	14,24 [%]	12,59 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,31% / 2023: 67,78% / 2022: 67,89% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation. The data vendor further aligned in 2023 their	

[14] Please see footnote no. 13.
[15] The Corporate Governance and Proxy Voting Policy applies to voting rights that DWS Investment GmbH may exercise as a management company by law or where the exercise has been delegated to DWS Investment GmbH by clients. In addition, DWS Investment S.A. has delegated the voting rights of equity securities held in collective investment vehicles for which it acts as the management company to DWS Investment GmbH. Likewise, where professional clients have delegated voting rights to DWS International GmbH, DWS International GmbH has sub-delegated these voting rights to DWS Investment GmbH.

						methodology with regulation to identify corresponding corporations.	
	5. Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	63,03 [%]	68,46 [%]	73,02 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 72,05% / 2023: 48,04% / 2022: 60,96% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
	6. Energy consumption intensity per high impact climate sector	For high impact climate sector A (NACE Code A “Agriculture, forestry and fishing”) - Energy consumption in GwH per million EUR of revenue of investee companies	0,67 [GWh / million EUR]	0,54 [GWh / million EUR]	0,75 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 0,01% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 0,00% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level.	

						Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector B (NACE Code B “Mining and quarrying”) - Energy consumption in GwH per million EUR of revenue of investee companies	2,18 [GWh / million EUR]	1,15 [GWh / million EUR]	10,00 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 0,93% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 0,93% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector C (NACE Code C “Manufacturing”) -Energy consumption in GwH per million EUR of revenue of investee companies	0,32 [GWh / million EUR]	0,45 [GWh / million EUR]	0,69 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 19,33% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 19,19% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been	

						determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector D (NACE Code D “Electricity, gas, steam and air conditioning supply”) - Energy consumption in GwH per million EUR of revenue of investee companies	2,53 [GWh / million EUR]	2,97 [GWh / million EUR]	7,45 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 2,52% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 2,47% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector E (NACE Code E “Water supply; sewerage; waste management and remediation activities”) - Energy consumption in	1,22 [GWh / million EUR]	2,99 [GWh / million EUR]	1,59 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 0,22% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 0,22% / 2023: 57,10% / 2022: 52,67% of all investments).	

		GwH per million EUR of revenue of investee companies				For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector F (NACE Code F “Construction”) - Energy consumption in GwH per million EUR of revenue of investee companies	0,13 [GWh / million EUR]	0,19 [GWh / million EUR]	0,24 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 0,59% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 0,54% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector G (NACE Code G “Wholesale and retail trade; repair of motor vehicles and	0,18 [GWh / million EUR]	0,25 [GWh / million EUR]	0,43 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 2,73% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 2,70% /	

		motorcycles") - Energy consumption in GwH per million EUR of revenue of investee companies				2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector H (NACE Code H "Transporting and storage") - Energy consumption in GwH per million EUR of revenue of investee companies	1,20 [GWh / million EUR]	1,08 [GWh / million EUR]	1,49 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 1,78% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 1,74% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
		For high impact climate sector L (NACE Code L "Real estate activities") – Energy	0,53 [GWh / million EUR]	0,58 [GWh / million EUR]	0,74 [GWh / million EUR]	The impact has only been determined in relation to investments in companies (2024: 2,30% / 2023: 80,55% / 2022: 76,00% of all investments) for which data	

		consumption in GwH per million EUR of revenue of investee companies				was available (2024: 2,24% / 2023: 57,10% / 2022: 52,67% of all investments). For 2024, the eligibility and coverage ratios have been determined on a sector-specific level. Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	
Biodiversity	7. Activities negatively affecting biodiver-sity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	8,50 [%]	0,24 [%]	0,05 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,75% / 2023: 67,38% / 2022: 66,82% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation. The data vendor implemented a methodology update in 2024 that resulted in a significant increase in the number of companies identified as having a negative impact under this indicator. This change limits	**General Framework:** **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Engagement:** **Actions taken**: In the Actively and Passively Managed Portfolio Business, DWS[17] considers

[17] Please see footnote no. 13.

						data comparability with previous reporting periods.	biodiversity where relevant in strategic engagements with selected investee companies. **Proxy Voting [18]:** **Actions taken**: In the Actively and Passively Managed Portfolio Business, if deemed appropriate, DWS analyses proposals to reduce negative environmental impacts and an investee company's overall environmental footprint.
Water	8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,22 [tonnes / million EUR]	0,36 [tonnes / million EUR]	252,19 [tonnes / million EUR]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 1,05% / 2023: 0,85% / 2022: 6,30% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation. The data vendor changed their methodology in 2023 which led to a significant reduction of the reported values on issuer level.	**General Framework:** **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Engagement:** **Actions taken**: DWS[19] is committed to engage on water risk within its engagement framework for the Actively and Passively Managed Portfolio.

[18] Please see footnote no. 15.
[19] Please see footnote no. 13.

							Additionally, when DWS deems a company to cause significant negative impact on water issues and this is reflected in the DWS Norm Controversy Assessment[20] as a breach of the United Nations Global Compact (UNGC) principle 7, this breach is considered in engagements.
Waste	9. Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	1,06 [tonnes / million EUR]	4,30 [tonnes / million EUR]	12,22 [tonnes / million EUR]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 70,01% / 2023: 20,10% / 2022: 22,59% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	**General Framework:** **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Engagement:** **Actions taken**: When DWS[21] deems a company to cause significant negative impact on waste issues and this is reflected in the DWS Norm Controversy Assessment as a breach of the UNGC principle 7, this breach is considered in engagements in the Actively and Passively Managed Portfolio Business.

[20] The DWS Norm Controversy Assessment is used as an indicator for an issuer's exposure to norm-related issues (see also description of actions for indicator 10).
[21] Please see footnote no.13.

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS							
Social and employee matters	10. Violations of UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guide-lines for Multinatio-nal Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,10 [%]	0,26 [%]	0,16 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 75,53% / 2023: 69,89% / 2022: 68,61% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	**General framework:** **Actions taken**: For several products in the Actively Managed Portfolio Business, the Norm Controversy Assessment evaluates the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles include, but are not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The application of this approach lies in the discretionary ownership of the institutional client. In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives.

							Engagement: **Actions taken**: In order to mitigate or eradicate severe violations of the international standards mentioned above, DWS[22] has included the Norm Controversy Assessment as a metric for determining its engagement prioritisation lists in the Actively and Passively Managed Portfolio Business. **Proxy Voting [23]:** **Actions taken**: In case (among others) the investee company is facing very severe ESG controversies (e.g., violations against UN Global Compact principles), DWS would hold the board members accountable. Furthermore, DWS analyses ESG-related shareholder proposals while considering recognized standards and evaluates them on a case-by-case basis. For example, DWS may support shareholder proposals asking companies to adopt labour and human rights standards and report on human rights risks in its operations or its supply chains. DWS may also vote for shareholder proposals requesting that investee companies adopt fair labour practices consistent with recognised international human rights standards, including policies to eliminate gender-based violence and other forms of harassment at the workplace, as well as proposals asking an investee company to prepare a report on its efforts to promote a safe workplace for all employees. **Exclusions:**

[22] Please see footnote no. 13.
[23] Please see footnote no. 15.

							Actions taken: Several products for institutional clients apply customized ESG screens that reflect the international standards above. **Index Selection:** **Actions taken**: Certain products managed under the Passively Managed Portfolio Business are tracking reference indices which incorporate criteria such as the exclusion of investee companies which fail to comply with the UNGC principles or OECD Guidelines for Multinational Enterprises. **Actions planned**: DWS is aiming to maintain or increase the number of such products in 2025, which may depend on factors such as demand, market dynamics, market standards, and index availability. **Oversight:** **Actions taken**: For the Actively Managed Portfolio Business, DWS has put in place oversight controls for ESG integration where exposure in ESG laggards related to norm controversies is taken into consideration against a pre-defined risk appetite.
	11. Lack of processes and compliance mechanisms to monitor compli-ance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for	0,56 [%]	34,78 [%]	40,86 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,67% / 2023: 67,14% / 2022: 66,02% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available	**General framework:** **Actions taken**: For several products in the Actively Managed Portfolio Business, the Norm Controversy Assessment evaluates the behaviour of companies in relation to generally accepted international standards and principles of responsible business conduct within, amongst others, the framework of the principles of the United Nations Global Compact, the United Nations Guiding Principles, the standards of the International Labour Organization and the OECD Guidelines for Multinational Enterprises. Examples of topics covered within these standards and principles include, but are

		Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises				were excluded from the calculation. The data vendor implemented a methodology update in 2024 that resulted in a significant decrease in the number of companies identified as having a negative impact under this indicator. This change limits data comparability with previous reporting periods.	not limited to, human rights violations, violations of workers' rights, child or forced labour, negative environmental impacts and business ethics. The application of this approach lies in the discretionary ownership of the institutional client. In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Engagement:** **Actions taken**: In order to mitigate or eradicate severe violations of the international standards mentioned above, DWS[24] has included the Norm Controversy Assessment as a metric for determining its engagement prioritisation list in the Actively and Passively Managed Portfolio Business. **Proxy Voting[25]:** **Actions taken**: In case (among others) the investee company is facing very severe ESG controversies (e.g., violations against UN Global Compact

[24] Please see footnote no. 13.
[25] Please see footnote no. 15.

							principles), DWS would hold the board members accountable and vote against their re-election. Furthermore, DWS analyses ESG-related shareholder proposals while considering recognized standards and evaluates them on a case-by-case basis. For example, we may support shareholder proposals asking companies to adopt labour and human rights standards and report on human rights risks in its operations or its supply chains.
	12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	14,06 [%]	16,98 [%]	15,25 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 55,71% / 2023: 21,36% / 2022: 14,04% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation. Based on the guidance given in paragraph 22 of the 'Clarifications on the European Supervisory Authorities' (ESA) draft RTS under SFDR of 02 June 2022, this indicator is expressed as a weighted average.	**General Framework:** **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Engagement** [26]**:** **Actions taken**: Overall, gender pay gap disclosures are not mandatory all around the world. Companies are encouraged to disclose this information.

[26] Please see footnote no.13.

	13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	37,27 [%]	35,53 [%]	33,25 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 72,05% / 2023: 66,45% / 2022: 65,77% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation. Based on the guidance given in paragraph 22 of the 'Clarifications on the European Supervisory Authorities' (ESA) draft RTS under SFDR of 02 June 2022, this indicator is expressed as a weighted average.	**General Framework:** **Actions taken:** In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Engagement:** **Actions taken**: Gender diversity is part of the topic of "board diversity" that has been included in DWS's[27] engagements during 2024. **Proxy Voting** [28]**:** **Actions taken**: DWS expects its investee companies to incorporate gender diversity into their board composition and refreshment processes and to adhere to national best practice stipulations on gender representation. DWS requires boards to generally have a gender diversity of at least 30% for developed markets ex. Japan (25%) and UK (33%), and at least one female board member for other markets. We acknowledge that investee companies may need to

[27] Please see footnote no. 13.
[28] Please see footnote no. 15.

							comply with local laws, regulations and market best practices on the demographics of board membership which are continually evolving.
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00 [%]	0,00 [%]	0,00 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,38% / 2023: 67,85% / 2022: 67,67% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	**General Framework:** Since the production and use of controversial weapons have been deemed as regulated or prohibited under the below-mentioned Conventions, DWS generally seeks to avoid investments or business relationships in relation thereto. DWS is guided by the following definitions for controversial weapons: • Cluster Munitions as defined and banned in 2008 by the Convention on Cluster Munitions; • Anti-Personnel Mines as defined and banned in the Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-personnel mines and their destruction; including as well anti-personnel time delay explosives and non-detectable fragment explosives as defined by Protocol I, II of the Convention on Certain Conventional Weapons • Biological weapons as defined in the Biological Weapons Convention • Chemical weapons as defined in the Chemical Weapons Convention **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of

							sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. **Index Selection:** **Actions taken**: Certain products managed under the Passively Managed Portfolio Business are tracking reference indices which incorporate criteria such as the exclusion of investee companies which breach certain revenue thresholds in controversial activities including conventional, unconventional, and nuclear weapons.

Indicators applicable to investments in sovereigns and supranationals

Adverse sustainability indicators		Metric	Impact 2024	Impact 2023	Impact 2022	Explanation	Actions taken, and actions planned, and targets set for next reference period
Environmental	15. GHG intensity	GHG intensity of investee countries	233,27 [tonnes / million EUR]	315,92 [tonnes / million EUR]	320,52 [tonnes / million EUR]	The impact has only been determined in relation to investments (2024: 19,12% / 2023: 18,02% / 2022: 20,04% of all investments) in sovereigns and supranationals for which data was available (2024: 17,97% / 2023: 16,76% / 2022: 18,89% of all investments). Investments in companies or real estate as well as assets for which no data was available	**General Framework:** **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS

						were excluded from the calculation.	has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. Several products for institutional clients apply the ESG Quality Assessment of sovereigns which assesses a peer group comparison considering, amongst others, environmental aspects. Additionally, the Sovereign Climate and Transition Risk Assessment tracks countries' developments in terms of climate performance, i.e., sheds light on how well countries are progressing in implementing necessary policies. However, discretionary ownership lies with the institutional client.
Social	16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	8,75 [absolute number] 7,67 [%]	8,00 [absolute number] 7,10 [%]	7,67 [absolute number] 7,52 [%]	The impact has only been determined in relation to investments (2024: 19,12% / 2023: 18,02% / 2022: 20,04% of all investments) in sovereigns and supranationals for which data was available (2024: 17,97% / 2023: 16,76% / 2022: 19,18% of all investments). Investments in companies or real estate as well as assets for which no data was available were excluded from the calculation.	**General Framework:** **Actions taken**: In general, for DWS's financial products in the Actively Managed Portfolio Business, the product-specific investment strategy does not apply a dedicated steering mechanism of the values of principal adverse impact indicators at overall portfolio level. However, for funds in the Actively Managed Portfolio Business in scope of the Disclosure Regulation, which commit to a minimum share of sustainable investments, the principal adverse impact indicators are taken into account based on relevance for sustainable investments as part of the "Do No Significant Harm" assessment. For this purpose, DWS has established quantitative thresholds and/or qualitative values to assess a significant harm on any of the environmental or social sustainable investment objectives. For several products in the Actively Managed Portfolio Business, the ESG Quality Assessment assesses for sovereigns a peer group comparison considering

							environmental and social criteria as well as indicators for good governance, including, for example, the political system, the existence of institutions and the rule of law. Additionally, the Freedom House Status of countries is taken into consideration. Countries that are classified as “not free” are excluded as an investment. However, application of those approaches lie in the discretionary ownership of the institutional client. **Index Selection:** **Actions taken**: Certain products managed under the Passively Managed Portfolio Business are tracking reference indices which incorporate criteria to reduce exposure to or to exclude countries with violations of social norms. This may include index-level rules such as minimum thresholds in Country ESG Ratings and minimum Freedom House scores.

Other indicators for principal adverse impacts on sustainability factors							
Adverse sustainability indicators		**Metric**	**Impact 2024**[29]	**Impact 2023**[30]	**Impact 2022**[31]	**Explanation**	**Actions taken, and actions planned, and targets set for next reference period**
Indicators applicable to investments in investee companies							
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS							
Emissions	4. Investments in companies without carbon emission reduction initiatives	Share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement	49,26 [%]	25,81 [%]	41,56 [%]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,68% / 2023: 65,72% / 2022: 64,04% of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation. The data vendor implemented a methodology update in 2024 that resulted in a significant increase in the number of companies identified as having	Please refer to principal adverse impact indicators 1 to 6 of the indicators applicable to investee companies.

[29] The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. They are further based on products where DWS is acting as management company, where DWS delegates portfolio management to third parties, or where third parties delegate portfolio management to DWS. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology will typically exclude such securities or issuers from the calculation. For target fund investments, a “look-through” into target fund holdings may be performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAIIs follows DWS’s current interpretation of the regulatory requirement and may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications. The figures presented in this statement do not include PAIs in relation to specific instrument types, such as derivative instruments.

[30] Please see footnote no. 29.

[31] Please see footnote no.29.

						a negative impact under this indicator. This change limits data comparability with previous reporting periods.	
Human Rights	14. Number of identified cases of severe human rights issues and incidents	Number of cases of severe human rights issues and incidents connected to investee companies on a weighted average basis	0,03 [absolute number]	0,02 [absolute number]	0,01 [absolute number]	The impact has only been determined in relation to investments in companies (2024: 80,45% / 2023: 80,55% / 2022: 76,00% of all investments) for which data was available (2024: 73,24% / 2023: 67,33% / 2022: 59,88%of all investments). Investments in real estate or sovereigns as well as assets for which no data was available were excluded from the calculation.	Please refer to principal adverse impact indicators 10 and 11 of the indicators applicable to investee companies

C / Description of policies to identify and prioritise adverse impacts of investment decisions on sustainability factors

DWS Group's framework to identify and prioritise principal adverse impacts of investment decisions applies to DWS and was initially approved by its governing body on 28.06.2023 and reaffirmed on 10.06.2025.

1. Identification of principal adverse impacts

DWS measures the principal adverse impacts of its investment decisions via the applicable mandatory indicators as defined in the Delegated Regulation. In addition, as required by the Delegated Regulation, DWS selected the following two additional principal adverse impact indicators from a prescribed indicators set:

- Climate and other environment-related indicator: Investments in companies without carbon emission reduction initiatives (applicable to investments in investee companies)

- Indicator for social and employee matters, respect for human rights, anti-corruption and anti-bribery matters: Number of identified cases of severe human rights issues and incidents (applicable to investments in investee companies)

The selection of the additional indicators took place in accordance with DWS Group's overall sustainability strategy which applies to DWS. Furthermore, DWS considered the relevance of the principal adverse impact indicators in the context of its business activities, likelihood and potential severity of an impact as well as data quality and availability.

2. Prioritisation of principal adverse impacts

For the prioritisation of principal adverse impacts, DWS Group takes strategic relevance, regulatory requirements, and market developments into consideration. Additionally, prioritising principal adverse impacts is influenced by quantitative aspects, such as data quality, data availability, and development of principal adverse impacts over time. Based on those factors, DWS Group prioritised the topic climate change. As part of its Net Zero Asset Managers (NZAM) initiative signatory status for 2024, DWS Group has the ambition to become climate-neutral in its actions in line with the Paris Agreement. DWS as part of DWS Group follows this strategic positioning and prioritisation outcome.

DWS considers principal adverse impacts through (1) its product range strategy, (2) DWS Group policies, (3) exclusion practices on portfolio or index level, and (4) stewardship activities. With regard to (1), DWS launches or manages both ESG and non-ESG products acknowledging a differentiated client demand as well as evolving regulatory developments. Stewardship activities are explained in more detail in Section D. The measures described below fall under (2) and (3). To what extent they are applicable to DWS's financial products depends on the respective financial product's investment strategy or the consent of third parties.

- DWS Coal Policy[32]: With this policy, DWS takes actions that are designed to reduce its investments in and funding of coal-related activities, such as excluding new investments in coal developers and in companies with a

[32] Available here for additional information. Exceptions: physically replicating Passive funds, existing funds issued by the Illiquid Business. For products not under unilateral DWS control, implementation is subject to approval from third parties (clients, cooperation partners, US fund boards).

coal share of revenues greater than 25%. This policy is applicable to products under unilateral DWS control and has been rolled out and integrated into existing documentation of in-scope products in scope during 2023.

- Controversial Weapons Statement[33]: DWS's products in scope of this statement aim to exclude investments in companies identified as controversial weapon companies based on their direct or indirect involvement with controversial weapons. Controversial weapons are those weapons which, due to their harmful impact or indiscriminate effects, are subject to international conventions including cluster munitions, anti-personnel mines, biological and chemical weapons.

- ESG screens: For institutional clients, DWS applies customized ESG screens or tracks (customized) indices based on the individual ESG preferences of the client including, where relevant, exclusions with regard to fossil fuels, violations of international norms on social and environmental matters, such as the UN Global Compact and OECD Guidelines for Multinational Corporations.

3. Integration of principal adverse impacts on sustainability factors in the investment process

Given the diverse nature of its business, DWS has an asset class approach with regard to integrating principal adverse impacts, differentiating between the Actively Managed Portfolio Business and the Passively Managed Portfolio Business.

3.1. Actively Managed Portfolio Business

Methodology

For the Actively Managed Portfolio Business of DWS, sustainability-related information is integrated into DWS portfolio management systems. This enables investment professionals to have visibility on the sustainability profile of the respective portfolio – including information on principal adverse impacts on sustainability factors where relevant. As part of the investment process, investment professionals are obliged to adhere to investment guidelines including those addressing principle adverse impacts of the respective financial product.

Subject to the product specific investment policy or consent of third parties, the Actively Managed Portfolio Business applies the DWS Controversial Weapons Statement[34] and DWS Coal Policy[35]. Actively managed products set up for institutional clients apply customized ESG screens based on the individual ESG preferences of the client (see section 2 'Prioritisation of principal adverse impacts').

Data sources and margin of error

DWS utilises its bespoke ESG tool, the DWS ESG Engine to determine the principal adverse impact indicators and make this information available to DWS portfolio management systems. To that end, the ESG Engine uses data from the leading commercial ESG data vendors such as MSCI ESG, ISS ESG, S&P Trucost, and Morningstar Sustainalytics as well as DWS proprietary research. This includes purpose-built data package for regulatory reporting like the "MSCI SFDR Adverse Impact Metrics". Methodology, vendor, and data selection are controlled by the corresponding governance body for the ESG Engine.

[33] Available here for additional information. The restrictions are applied across asset classes with adjustments based on legal, regulatory and contractual differences in specific regions and products.
[34] Please see footnote no. 33.
[35] Please see footnote no. 32.

Although DWS has broad ESG data coverage through a multi-vendor approach and specializes in ESG data aggregation, processing and developing unique ESG methodologies through the DWS ESG Engine, certain limitations may apply. DWS uses data from multiple data vendors, public sources and/or DWS internal assessments and research in order to perform a consolidated and qualified ESG assessment approach. In ESG and sustainability assessments, DWS uses publicly reported data, as well as estimated data, if no adequate primary data is available. Based on the current understanding of the regulatory guidelines on estimates, DWS classifies all data that is not publicly reported by investee companies under (regulatory) reporting requirements as estimated data. This also includes all data received from data vendors if the data vendor does not provide a qualified disclosure on coverage of estimated data. Therefore, up to 100% of the data used may be reported as estimated data.

DWS expects a further increase in the share of reported data with the official reporting of investee companies increasing in the coming years due to the introduction of corresponding legal obligations.

3.2. Passively Managed Portfolio Business

Methodology

For the Passively Managed Portfolio Business, the incorporation of ESG factors is integrated into portfolio managers' investment process, analysis and decisions and product specialists' index due diligence and selection processes. The business has established minimum standards with relation to the selection of new indices and a documented approach regarding the removal of securities with involvement in controversial weapons subject to materiality considerations (such materiality assessment is only applicable for direct investment policy funds). In addition, for indirect investment policy funds (synthetic products), the DWS Coal Policy[36] applies.

Data sources and margin of error

Please refer to the section above about data sources used to identify principal adverse impacts, which also applies to the Passively Managed Portfolio Business. Additionally, the ESG Engine provides data for the selection of new indices. Further, ESG data from sources other than the ESG Engine may be utilised in the index selection due diligence process (e.g., ESG data from index providers).

4. Governance

DWS, as a member of DWS Group, is represented in the sustainability governance of DWS Group.
Sustainability governance at DWS Group starts with the DWS Executive Board, which has the overall responsibility for managing the business activities of DWS Group. This includes the responsibility for managing sustainability-related risks and opportunities. To enable a focus on sustainability topics, the Executive Board has delegated its responsibility for the implementation of the sustainability strategy to the DWS Group Sustainability Committee which reports to the DWS Executive Board regularly and as required. The committee is mandated with implementing the sustainability strategy as approved by the DWS Executive Board on fiduciary and corporate levels across business and infrastructure areas and legal entities.
The responsibility for approving key risk management principles, risk appetite metrics, and thresholds related to sustainability risks and adverse impacts has been assigned to the DWS Risk and Control Committee. The DWS Reputational Risk Committee is responsible for evaluating and monitoring matters which might trigger potential reputational risk.
Further details on DWS Group's sustainability governance set-up can be found in DWS Group's Sustainability Statement integrated in the Annual Report 2024.

[36] Available here for additional information. Exceptions: physically replicating Passive funds, existing funds issued by the Illiquid Business. For products not under unilateral DWS control, implementation is subject to approval from third parties (clients, cooperation partners, US fund boards).

The various DWS Group's divisions are responsible for setting up, maintaining, and reviewing policies, processes, and frameworks through which the sustainability strategy is implemented in the divisional processes. This includes the above-mentioned framework to identify and prioritise principal adverse impacts which also applies to DWS.

D / Engagement policies

At DWS, our fiduciary responsibility as an asset manager is to act in the best economic interest of our clients including exercising stewardship. The objective of stewardship is to safeguard and enhance the long-term financial value of clients' investments and their financial interests. DWS exercises such stewardship principally through proxy voting (where DWS exercises voting rights) and engagement. Engagement can influence proxy voting decisions and proxy voting can be an escalation tool in engagement.

DWS's direct exchange and dialogue with investees is part of its sustainability actions. As part of the prioritisation process, (see section C.2. 'Prioritisation of principal adverse impacts'), where there is no reduction of principal adverse impacts achieved over more than one reporting period, DWS will review its engagement policy to evaluate whether and how they should be adapted to further mitigate adverse impacts of investment decisions.

The DWS Engagement Policy[37] establishes inter alia the engagement framework for DWS on how to engage with its investees in relation to equity as well as fixed income investments in the Actively and Passively Managed Portfolio Business. The policy addresses types and methods of engagement, escalation strategies, expectations regarding communication with inter alia DWS as an investor and DWS acting on behalf of its clients on several topics, including ESG.

The DWS Corporate Governance & Proxy Voting Policy[38] details DWS's voting framework in relation to its equity investments. It gives a general overview of circumstances that we consider important when evaluating voting proposals and describes guidelines on how to vote in relation to topics such as ESG-related shareholder proposals.

DWS's engagement and proxy voting activities[39] cover the following topics and support the mitigation of the corresponding principle adverse impacts (for details, please see the table in Chapter B of this statement) if applicable:

- Climate change: DWS engages with investees on topics such as greenhouse gas reduction targets, climate transition plans, and phase-out from coal. DWS expects the boards and the management of investee companies to assess risks and impacts arising from or associated with environmental developments. DWS evaluates shareholder proposals on a case-by-case basis guided by the principles outlined in the DWS Corporate Governance & Proxy Voting Policy.

- Biodiversity: In its engagement framework, DWS has included biodiversity where relevant in strategic engagements with selected investee companies. DWS analyses proposals that aim to reduce negative environmental impacts and an investee company's overall environmental footprint.

- Water: DWS is committed to engage with investees on water risk. Water risk is one of the criteria used within the DWS engagement prioritisation process.

- International norms incl. human rights: To mitigate or eradicate severe violations of the international standards, DWS has included the Norm Controversy Assessment as a metric for determining its engagement prioritisation

[37] The Engagement policy sets out the key terms that apply to DWS Investment GmbH, DWS International GmbH, DWS CH AG and DWS Investment SA. All these legal entities have delegated their engagement activities to DWS Investment GmbH for equities & fixed income holdings except for DWS CH, which is restricted to only fixed income holdings.

[38] Available here for additional information. This policy applies to voting rights that DWS Investment GmbH may exercise as a management company by law or where the exercise has been delegated to DWS Investment GmbH by clients. In addition, DWS Investment S.A. has delegated the voting rights of equity securities held in collective investment vehicles for which it acts as the management company to DWS Investment GmbH. Likewise, where professional clients have delegated voting rights to DWS International GmbH, DWS International GmbH has sub-delegated these voting rights to DWS Investment GmbH.

[39] Please see footnotes no. 37 and 38.

lists. In case (among others) the investee company is facing very severe ESG controversies (e.g., violations against UN Global Compact norms) DWS would hold the board members accountable. Furthermore, DWS analyses ESG-related shareholder proposals while considering recognized standards and evaluates them on a case-by-case basis. For example, we may support shareholder proposals asking companies to adopt labour and human rights standards and report on human rights risks in its operations or its supply chains.

- Gender diversity: DWS expects its investee companies to incorporate gender diversity into their board composition and refreshment processes and to adhere to national best practice stipulations on gender representation. DWS requires boards to generally have a gender diversity of at least 30% for developed markets ex. Japan (25%) and UK (33%) and at least one female board member for other markets. DWS acknowledges that investee companies may need to comply with local laws, regulations, and market best practices on the demographics of board membership which are continually evolving.

E / References to international standards

DWS Group and DWS as its subsidiary, respectively, adhere to, or are guided by the following key sustainability-related responsible business conduct codes and internationally recognized standards for due diligence and reporting (non-exhaustive list). If applicable, the principal adverse impact indicators (PAIIs) used to measure alignment with those standards are stated in parentheses.

1. Overarching standards and initiatives

DWS Group is a signatory to the following framework:

- United Nations-backed Principles for Responsible Investment (PRI), a voluntary set of investment principles that offer a menu of possible actions for incorporating ESG issues into investment practice.

Furthermore, DWS Group published its sustainability statement prepared to meet the requirements of Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 (CSRD), as well as Sections 315b and 315c HGB for a non-financial group statement. As part of this statement, potential impacts of its downstream business activities on people and the environment, among others, are reported in accordance with the European Sustainability Reporting Standards (ESRS). The business activities of DWS, as a subsidiary of DWS Group, are reflected in the consolidated reporting of DWS Group.

2. Standards on controversial weapons

The following international conventions (amongst others) provide the basis for the exclusions related to controversial weapons that generally seek to avoid investments into companies with relevant exposures:

- Convention on Cluster Munitions, an international convention that prohibits the use, production, transfer, and stockpiling of cluster bombs (PAII 14);
- Anti-Personnel Mine Ban Convention, a convention on the prohibition of the use, stockpiling, production and transfer of anti-personnel mines and their destruction (including as well anti-personnel time delay explosives and non-detectable fragment explosives as defined by Protocol I, II of the Convention on Certain Conventional Weapons) (PAII 14);
- Biological Weapons Convention, a convention on the prohibition of the development, production, acquisition, transfer, stockpiling and use of biological and toxin weapons (PAII 14);
- Chemical Weapons Convention, a convention on the prohibition of the development, production, stockpiling and use of chemical weapons and on their destruction (PAII 14).

DWS aims to generally exclude companies which are involved in development, manufacturing, procurement, distribution, and use of several types of controversial weapons systems or components thereof, from its investment universe. For the majority of DWS's investments, data for this screening is processed through the DWS ESG Engine, which in turn sources the information from multiple data providers including, but not limited to, MSCI ESG, ISS ESG, S&P Trucost, and Morningstar Sustainalytics. For information on the data coverage for PAII 14, please refer to the table in section B of this statement.

3. Standards and initiatives on human rights

The following international standards guide DWS's investment process in the Actively and Passively Managed Portfolio Business with regards to human rights related issues:

- UNGC, a global initiative for corporate sustainability (PAII 10,11, additional PAII 14 of Table 3 Annex I of the Delegated Regulation);

- UN Guiding Principles for Business and Human Rights, a set of guidelines for states and companies to prevent, address and remedy human rights abuses committed in business operations (PAII 10,11, additional PAII 14 of Table 3 Annex I of the Delegated Regulation);

- OECD Guidelines for Multinational Corporations, recommendations on responsible business conduct addressed by governments to multinational enterprises (PAII 10,11, additional PAII 14 of Table 3 Annex I of the Delegated Regulation);

- International Labour Organisation (ILO) Declaration on Fundamental Principles and Rights at Work (PAII 10,11, additional PAII 14 of Table 3 Annex I of the Delegated Regulation).

DWS measures its alignment by screening investments for involvement in severe violations of the international standards mentioned above. Several products in the Actively Managed Portfolio Business for institutional clients apply customized ESG screens excluding issuers with violations of the international standards described above. The data for this screening is processed through the DWS ESG Engine. For information on the data coverage for PAII 10,11, and additional PAII 14, please refer to the table in section B of this statement. For the Passively Managed Portfolio Business, certain products track reference indices which incorporate criteria such as the exclusion of investee companies which fail to comply with the UNGC principles or OECD Guidelines for Multinational Enterprises.

4. Standards and initiatives on climate change

DWS Group and DWS as its subsidiary, respectively, are signatory/committed to the following initiatives and apply the related frameworks related to climate change for managing their investments:

- Net Zero Asset Managers Initiative, an international group of asset managers committed to supporting the goal of net zero greenhouse gas emissions by 2050 or sooner (PAII 1 to 6, additional PAII 4 of Table 2 Annex I of the Delegated Regulation)[40];

- SBTi, a non-profit partnership that drives ambitious climate action in the private sector by enabling organisations to set science-based emissions reduction targets (PAII 1 to 6, additional PAII 4);

The above-mentioned initiatives are aligned with the objectives of the Paris Agreement.

Furthermore, DWS Group reported on climate-related topics under

- the Climate Disclosure Project (CDP), an international non-profit organisation that helps companies and cities to disclose their environmental impact (PAII 1 to 6);

[40] In January 2025, NZAM launched a review of the initiative to ensure NZAM remains fit for purpose in the new global context. As the initiative undergoes this review, it has suspended its activities. DWS Group aims to regularly review its approach to reflect changing regulatory, market and client developments as appropriate. In that context, it will review and consider the results of the NZAM review, once available.

DWS Group has a stated ambition to become climate-neutral in its actions by 2050, in line with the Paris Agreement. Based on this ambition, DWS Group became a founding signatory of the NZAM initiative and set its 2030 interim decarbonisation target as part of this initiative.

DWS Group has initially included approximately 35% of its total global Assets under Management (as of 31 December 2020) as in-scope for these 2030 interim targets. The remaining assets excluded from this net zero scope comprise a) security types where established net zero or carbon accounting methodologies do not yet exist, or b) DWS's and other entities' products where changing their investment policies requires prior approval from clients or independent fund directors.

For the in-scope assets, DWS Group's interim target is to seek a 50% reduction in inflation-adjusted Weighted Average Carbon Intensity (WACI adj.) related to Scope 1 and 2 emissions by 2030, compared to the base year 2019. This target is consistent with a fair share of the 50% global reduction in CO_2 consistent with the climate scenarios in the IPCC special report on global warming of 1.5°C published in 2018.

DWS Group reported progress on its interim net zero targets on an annual basis via CDP. The data for carbon intensity of issuers is sourced from external ESG data vendors and provided by the DWS ESG Engine. For information on the data coverage for PAII 1 to 6, and additional PAII 4 of Table 2 Annex I of the Delegated Regulation, please refer to the table in section B of this statement.

F / Historical comparison

In this statement on principal adverse impacts of investment decisions on sustainability factors, DWS also provides in the above section B 'Description of the principal adverse impacts on sustainability factors' a historical comparison of the reference period for the calendar year 2024 ("Reference period 2024") covered by this statement, with the previous reference periods of the calendar years 2023 ("Reference period 2023") and 2022 ("Reference period 2022").
The regulatory landscape in the sustainable finance area continues to evolve. To meet these developments aimed at protecting investors through transparency, consistency, and comparability, DWS continuously develops and evolves its sustainable finance related policies, data, methodologies, and processes. This also encompasses the data, methodologies, and processes DWS applies to assess and calculate the principal adverse impacts of its investment decisions on sustainability factors.

Overall, principal adverse impacts may vary from year to year due to a range of underlying factors. These include, but are not limited to:

- Changes in the methodologies applied by third-party data vendors,
- Changes in data coverage,
- Shifts in the investment allocation of the products,
- Changes in principal adverse impacts of portfolio companies or investments,
- Market dynamics and fund flows,
- Consideration of principal adverse impacts by the individual financial products, and the launch and closure of financial products

When comparing Reference period 2024 to Reference period 2023, significant variations in the PAIIs can be attributed to these main drivers. Specifically, methodology changes have notably influenced PAIIs 1 (Scope 3 GHG emissions), 7,11, and additional PAII 4; increased data coverage has affected PAIIs 8 and 9; shifts in the products' investment allocation have impacted PAIIs 2, 4, 8, 9, and 10; while changes in the principal adverse impacts of underlying portfolio companies or investments have influenced PAIIs 4, 8, 9, 10, 15, and additional PAII 14. Detailed information on methodology changes relevant to individual indicators is also provided in Section B.

Compared to Reference period 2022 and 2023, eligibility and coverage for PAII 6 is provided on a sector-specific basis for Reference Period 2024.
