The border tax and other U.S. tax issues

Investors eagerly await U.S. tax reform, but are as confused about the border tax as are Republicans. Even without it, the corporate tax reform won't be an easy ride.

Trump, tax and trade

Potential tax reform is one of three reasons why U.S. equity markets have rallied since the elections. For now, it also remains the most likely to keep markets on the edge. One item that is limiting investors' enthusiasm is the Border Adjustment Tax. They are not alone.

"Anytime I hear border adjustment, I don't love it. Because usually it means we're going to get adjusted into a bad deal. That's what happens. And it's too complicated. They get credit on some parts and not other parts. Where was the part made? I don't want that. I just want it nice and simple."¹ On that, at least, Donald Trump's views are not all that controversial.

We believe there to be plenty of low-hanging fruits in reforming the byzantine and loophole-ridden U.S. tax code. We are skeptical of the broader agenda as presented by Representative Kevin Brady, chairman of the powerful House Ways and Means Committee, and House Speaker Paul Ryan, however. In particular, we fear that bundling tax cuts with the controversial border adjustment tax (BAT) risks derailing the reform altogether. "It is fine if they lower the tax on production, but they shouldn't raise taxes on trade", says David Bianco, Deutsche AM's Chief Investment Strategist in the Americas. The worst-case scenario, from a market perspective, would be no tax legislation passing Congress this year.

Trump has pushed stock prices but not earnings forecasts

¹Consensus-EPS forecasts for S&P 500 Index; Source: Thomson Reuters Datastream, Deutsche Asset Management Investment GmbH; as of 2/21/17.

Our base case is that the BAT will be scrapped and that the tax bill, including a corporate-tax-rate cut to 25%, will still be signed this year. This could add 10 U.S. dollar to S&P 500 Index earnings

- Companies and investors alike are hoping for a swift corporate-tax reform.
- We believe the border adjustment tax is a poor instrument at this time.
- Either way, tax reform is a arduous task that will test the Republicans' unity.

All opinions and claims are based upon data on 2/23/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Deutsche Asset Management Investment GmbH

per share (EPS), either in 2017 or 2018, depending on when tax cuts are implemented. Markets, we believe, have not priced in this figure. While the S&P 500 Index has rallied double digits since the election, it has done so in line with global markets and on the back of improving economic data. Thus, markets have not been irrationally enthusiastic about the tax reform. This is also visible in earnings forecasts for 2017 and 2018 that have hardly moved (from a seasonal pattern, this is already a slightly positive sign). Investors could, however, be disappointed. Even if the BAT is scrapped, other elements of the tax reform could still meet resistance within the Republican Party (GOP). Moreover, the politics behind the BAT proposals, as well as some of Mr. Trump's statements point to the potential for other, more targeted protectionist measures. While it is too early to judge the progress of tax policies after roughly one month, one cannot be blind to the challenges still lying ahead.

U.S. tax-reform scenarios

	Current	Trump 2016 Plan	House GOP Plan
System	Worldwide (with deferral)	Worldwide (eliminate deferral)	Territorial
Tax Rate	35%	15%	20%
Deemed Repatriation (One time & mandatory)	No	10%	Cash: 8.75% Non-cash: 3.50%
CapEx Depreciation	Over Time	Optional / Immediate	100% / Immediate
Interest Expense	Deductible	Not deductible if immediate CapEx elected	Not deductible
Border Adjustment	No	No	Yes

Triggers for the tax reform

When Trump won the White House and the Republican Party secured their majority in Congress, hopes were running high that there would be swift progress on tax reform. There are various topics the GOP is likely to address with the reform: cutting U.S. corporate tax rates currently at 35% to at least get them in line with the OECD average of 25%; stopping tax avoidance; encouraging repatriation; and reducing the trade deficit as well as increasing U.S. employment by substituting domestic for foreign goods. These were the goals behind the comprehensive tax package introduced in June 2016 by Brady and Ryan, as part of the "A better way" agenda. This proposal is also referred to as "house GOP plan". The main points are:

- Corporate tax cut from 35% to 20%
- Immediate full expensing of capital purchases instead of depreciation over time
- No more expensing of interest payments
- Border adjustment tax: export revenues and import costs to be excluded from taxation

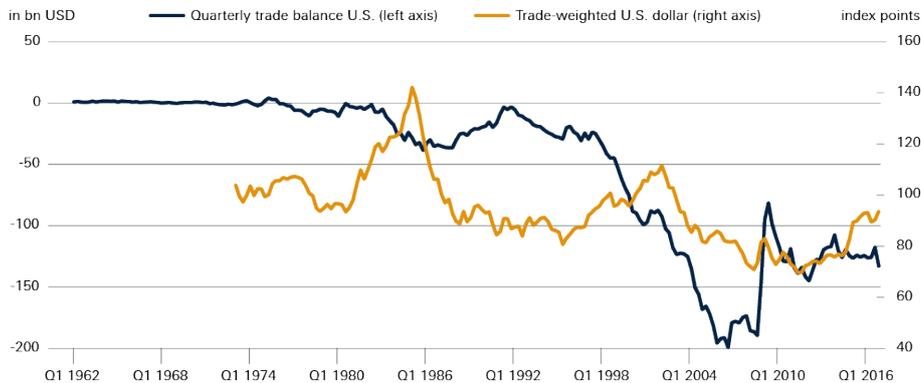

Unsurprisingly, point 1 is met with little resistance, provided a way can be found to pay for the tax cut. Points 2 and 3 would have significant ramifications for accounting, investing and tax strategies. But it is point 4 that has attracted most attention and

criticism, as it could severely impact different U.S. sectors, the U.S. dollar, foreign companies and potentially global trade.

U.S. trade deficit: no pay back since 1975

Source: Thomson Reuters Datastream, Deutsche Asset Management Investment GmbH; as of 2/21/17.

BAT – the GOP’s unwanted gift to America

One of the main intentions of the BAT is to refinance the reduction of the federal corporate tax rate. The BAT is expected to raise 1 trn USD over a 10-year period. Structuring the tax reform in a budget-neutral way (over a period of 10 years) may help avoid the need for a filibuster-proof majority. Instead, the GOP could pass it through the reconciliation process, which requires only 50 and not 60 votes (Republicans only hold 52 seats). The basic idea behind the BAT as proposed by Ryan/Brady is pretty simple: export revenues are no longer taxed while import costs are no longer tax deductible. However, there are various misperceptions about this special Ryan/Brady BAT as well as uncertainties in the academic literature on how such a tax might and should work. Most of the confusion stems from wrongly likening the BAT to a value-added tax (VAT) system or to tariffs. It is neither.

- BAT proponents complain that U.S. companies are treated unfairly in global trade as they lack the kind of VAT that for example France has. This is said to put a U.S. car manufacturer, say, at a disadvantage. Unlike its French competitor, the U.S. manufacturer is not being reimbursed for the VAT on exported goods. However, this is only logical as the U.S. manufacturer never paid any VAT in the first place, while the French manufacturer has. The VAT is due at each step of the value chain and recollected on the next sale, submitting only the incremental amount to the government. The buyer of a car in France has to pay 20% VAT, independently of where the car was built. Meanwhile, the buyer of a car in the U.S. does not pay any tax similar to VAT (apart from local sales taxes), independently of where the car was built. So the U.S. and the French car builder face exactly the same costs in each respective territory. The end customer, however, does not.
- The second confusion often arises from the fact that the BAT is implemented by means of recognition in the profit and loss account. This gives it a much broader and non-discriminatory feel than import tariffs or export subsidies.

All opinions and claims are based upon data on 2/23/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Deutsche Asset Management Investment GmbH

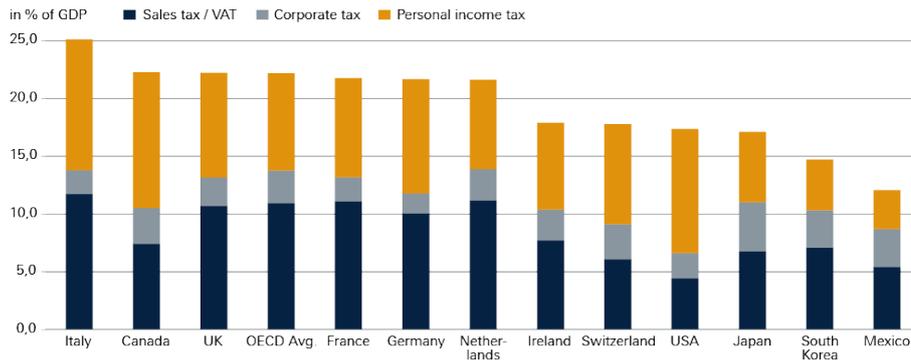

- The simultaneity of the export and import component of the BAT is a very important element. BAT proponents claim that this ensures that the rules of the World Trade Organisation (WTO) are not breached as trade volumes will be unaffected.
- This however, would only be the case if the dollar were to appreciate instantly to an extent that would offset the higher import and lower export prices from a U.S. perspective. With a corporate tax rate of 20%, this appreciation would need to be 25%. This would have massive repercussions for U.S. investments abroad, but also foreign U.S. creditors. Hard-currency debt issuers from emerging markets would be significantly affected.
- We believe, however, that a full currency adjustment on the day the BAT is introduced is unlikely. Think of controlled currency regimes, for example. An incomplete dollar adjustment would favor U.S.-based producers. In the short term, however, the opposite might happen: the dollar strengthens in anticipation of the BAT. But until it is put in place, U.S.-based exporters would face the disadvantage of a stronger dollar without benefiting from lower taxes.
- Who would be affected by the BAT in a non-ideal world? Put simply: importers, foreign exporters, U.S. consumers. But while it is little surprising that some of the biggest importers are opposing the tax, even some apparent beneficiaries have been voicing doubts. They fear the disruptions and unintended consequences of a BAT. There are many variables that will determine how the bill is being split between consumers, U.S. importers and non-U.S. exporters. They include: the price elasticity of the goods and services in question, income and substitution effects among consumers, the impact on U.S. wage growth and potential retaliation measures by other countries.
- What about budget neutrality? The BAT is supposed to raise revenues in order to partly pay for the corporate tax cut. However, it only raises revenues as long as the U.S. is running a trade deficit. In 2016 this amounted to 502 bn USD and the U.S. has recorded deficits since 1975. While this seems to refute economic wisdom that trade deficits cannot last forever the BAT would likely reduce the deficit by favoring exports vs. imports and thereby reduce additional revenues over time. Josh Feinman, U.S. Chief Economist for Deutsche AM, adds: "Corporate taxes account for less than 10% of federal tax receipts. The government could easily find other ways than a BAT to refinance a corporate tax cut. "

All opinions and claims are based upon data on 2/23/17 and may not come to pass. Corporate taxes are no major contributor to total tax receipts

Source: OECD, Deutsche Asset Management Investment GmbH; as of 2/21/17.

While we believe a textbook BAT has some merits for clearly defined purposes, we judge it a poor instrument at this time for two main reasons:

It threatens to delay and complicate tax reform. It risks implementation chaos and trade disruptions. Even if you think that U.S. profits and jobs moving abroad is indeed a major policy problem, there are better ways to stop this. Furthermore, trading partners might feel alienated and retaliate. As the European Commission's Vice President Jyrki Katainen said: "We have our own mechanisms to react." And some officials already stated that they see the BAT affecting WTO rules². That might not bother the U.S. directly, as they have ignored WTO rulings in the past, but it would certainly add to trading partners' resentment.

Scrapping the BAT could, however, lead to another unfavorable outcome. Instead of having a rules-based comprehensive tax system, some kind of ad-hoc tariffs could be installed, which could give Trump more leeway in deciding which company to sanction for unpatriotic behavior.

Expected Timeline and political camps

Trump announced a phenomenal tax reform to be introduced very soon. An obvious opportunity to do so would be on February 28th, when he will address a joint session of Congress. While he might again be short on details, we might get more clues about his general willingness to accept higher deficits. The following time line looks plausible: By May 2017 U.S. House and Senate pass the Fiscal Year 2018 budget to facilitate the passage of a U.S. tax reform. Once the House Ways and Means Committee approves a tax bill before August, the Senate will have its vote by October so that by December Congress and President Trump could sign the tax reform. This, however, could prove to be an optimistic scenario.

While the tax reform seemed to be a sure and fast thing to be put in place with the support of a Republican-controlled Congress, we believe there to be little unity about the details between Trump, the Ryan/Brady camp and much of the rest of Republicans in the House and Senate. We expect the BAT to be scrapped in its current form, resulting in roughly 100bn USD less revenues per year. Based on

²Source: Financial Times Ltd. as of 2/14/17

calculations by the Tax Foundation³, the corporate tax cut to 20% lowers revenues by 1.8trn USD over ten years. The gap would be reduced to 1.2 trn USD if the corporate tax rate was to be cut to only 25%. Both figures are static, in the sense of not considering the potential benefits to economic growth. Using dynamic calculations would reduce the gap resulting from a cut to 25% to 0.7 trn USD. With some additional creativity on the part of Congressional number crunchers, this might still be presented as budget neutral.

While we don't consider the BAT to be the issue that makes or breaks a tax reform, we fear there could be other road blocks. Even in case we only see a corporate-tax-rate cut to 25%, broadening the tax base and closing loopholes is likely to invoke controversies and heavy lobbying from all industries (and senators) affected. Frank Kelly, Deutsche Bank's Head of Public Affairs in the Americas, clarifies: "The tax reform needs speed and the full endorsement of the President. If not it gets killed in Congress because of the many vested interests affected."

Glossary

Earnings per share (EPS)

Earnings per share (EPS) is calculated as a companies' net income minus dividends of preferred stock, all divided by the total number of shares outstanding.

Emerging markets (EM)

Emerging markets (EM) are economies not yet fully developed in terms of, amongst others, market efficiency and liquidity.

European Commission (EU Commission)

The European Commission (EU Commission) is the executive body of the European Union (EU) which represents the interests of the EU.

Filibuster

A filibuster is a procedure in the U.S. Congress, in which the debate on a proposed piece of legislation is extended, potentially leading to entirely preventing the legislation's finalization.

Hard-currency bonds (debt)

Hard-currency bonds (debt) are bonds (debt) issued by legal entities in a hard currency such as the U.S. dollar, euro or Swiss franc.

House of Representatives

The United States House of Representatives is a legislative chamber consisting of 435 Representatives, as well as non-voting delegates from Washington, D.C. and U.S. territories. Representatives are elected for two-year terms and each state's representation is based on population as measured in the previous Census.

OECD

The Organization for Economic Co-operation and Development (OECD) started in 1948 as the Organization for European Economic Co-operation (OEEC) and changed its name in 1960, now representing 34 countries with democratic governments and market economies.

Reconciliation Process

The reconciliation process is a measure used by the Senate to facilitate resolutions that adjust tax and spending levels to a present budget resolution.

Republicans

The Republican Party (Republicans), also referred to as Grand Old Party (GOP), is one of the two major political parties in the United States. It is generally to the right of its main rival, the Democratic Party.

All opinions and claims are based upon data on 2/23/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Deutsche Asset Management Investment GmbH

S&P 500 Index

The S&P 500 Index includes 500 leading U.S. companies capturing approximately 80% coverage of available U.S. market capitalization.

Sales tax

A (conventional) sales tax is a tax only levied on goods and services to the final consumer.

United States Congress

The United States Congress is the legislature of the federal government. It is comprised of the Senate and the House of Representative, consisting of 435 Representatives and 100 Senators.

United States Senate

The United States Senate is a legislative chamber consisting of 100 Senators, with each state being represented by two Senators. Senators are elected for six year, overlapping terms in their respective state.

Value-added tax (VAT)

A value-added tax (VAT) is a consumption tax that is collected based on the incremental value added in each stage of production (as opposed to a sales tax where only the final consumer is taxed).

World Trading Organization (WTO)

The World Trade Organization (WTO) is an international organization based in Switzerland, which regulates commerce between nations through mutually agreed rules.

Risk warning

Investments are subject to investment risk, including market fluctuations, regulatory change, possible delays in repayment and loss of income and principal invested. The value of investments can fall as well as rise and you might not get back the amount originally invested at any point in time.

Investments in Foreign Countries – Such investments may be in countries that prove to be politically or economically unstable. Furthermore, in the case of investments in foreign securities or other assets, any fluctuations in currency exchange rates will affect the value of the investments and any restrictions imposed to prevent capital flight may make it difficult or impossible to exchange or repatriate foreign currency.

Foreign Exchange/Currency – Such transactions involve multiple risks, including currency risk and settlement risk. Economic or financial instability, lack of timely or reliable financial information or unfavorable political or legal developments may substantially and permanently alter the conditions, terms, marketability or price of a foreign currency. Profits and losses in transactions in foreign exchange will also be affected by fluctuations in currency where there is a need to convert the product's denomination(s) to another currency. Time zone differences may cause several hours to elapse between a payment being made in one currency and an offsetting payment in another currency. Relevant movements in currencies during the settlement period may seriously erode potential profits or significantly increase any losses.

High Yield Fixed Income Securities – Investing in high yield bonds, which tend to be more volatile than investment grade fixed income securities, is speculative. These bonds are affected by interest rate changes and the creditworthiness of the issuers, and investing in high yield bonds poses additional credit risk, as well as greater risk of default.

Hedge Funds – An investment in hedge funds is speculative and involves a high degree of risk, and is suitable only for “Qualified Purchasers” as defined by the US Investment Company Act of 1940 and “Accredited Investors” as defined in Regulation D of the 1933 Securities Act. No assurance can be given that a hedge fund's investment objective will be achieved, or that investors will receive a return of all or part of their investment.

Commodities – The risk of loss in trading commodities can be substantial. The price of commodities (e.g., raw industrial materials such as gold, copper and aluminium) may be subject to substantial fluctuations over short periods of time and may be affected by unpredicted international monetary and political policies. Additionally, valuations of commodities may be susceptible to such adverse global economic, political or regulatory developments. Prospective investors must independently assess the appropriateness of an investment in commodities in light of their own financial condition and objectives. Not all affiliates

All opinions and claims are based upon data on 2/23/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Deutsche Asset Management Investment GmbH

or subsidiaries of Deutsche Bank Group offer commodities or commodities-related products and services.

Investment in private equity funds is speculative and involves significant risks including illiquidity, heightened potential for loss and lack of transparency. The environment for private equity investments is increasingly volatile and competitive, and an investor should only invest in the fund if the investor can withstand a total loss. In light of the fact that there are restrictions on withdrawals, transfers and redemptions, and the Funds are not registered under the securities laws of any jurisdictions, an investment in the funds will be illiquid. Investors should be prepared to bear the financial risks of their investments for an indefinite period of time.

Investment in real estate may be or become nonperforming after acquisition for a wide variety of reasons. Nonperforming real estate investment may require substantial workout negotiations and/ or restructuring.

Environmental liabilities may pose a risk such that the owner or operator of real property may become liable for the costs of removal or remediation of certain hazardous substances released on, about, under, or in its property. Additionally, to the extent real estate investments are made in foreign countries, such countries may prove to be politically or economically unstable. Finally, exposure to fluctuations in currency exchange rates may affect the value of a real estate investment.

Structured solutions are not suitable for all investors due to potential illiquidity, optionality, time to redemption, and the payoff profile of the strategy. We or our affiliates or persons associated with us or such affiliates may: maintain a long or short position in securities referred to herein, or in related futures or options, purchase or sell, make a market in, or engage in any other transaction involving such securities, and earn brokerage or other compensation. Calculations of returns on the instruments may be linked to a referenced index or interest rate. In such cases, the investments may not be suitable for persons unfamiliar with such index or interest rates, or unwilling or unable to bear the risks associated with the transaction. Products denominated in a currency, other than the investor's home currency, will be subject to changes in exchange rates, which may have an adverse effect on the value, price or income return of the products. These products may not be readily realizable investments and are not traded on any regulated market..

Therefore, actual results may vary, perhaps materially, from the results contained herein. No representation or warranty is made by Deutsche Bank as to the reasonableness or completeness of such forward looking statements or to any other financial information contained herein. The terms of any investment will be exclusively subject to the detailed provisions, including risk considerations, contained in the Offering Documents. When making an investment decision, you should rely on the final documentation relating to the transaction and not the summary contained herein.

This document may not be reproduced or circulated without our written authority. The manner of circulation and distribution of this document may be restricted by law or regulation in certain countries, including the United States. This document is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction, including the United States, where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Deutsche Bank to any registration or licensing requirement within such jurisdiction not currently met within such jurisdiction. Persons into whose possession this document may come are required to inform themselves of, and to observe, such restrictions.

Kingdom of Bahrain

For Residents of the Kingdom of Bahrain: This document does not constitute an offer for sale of, or participation in, securities, derivatives or funds marketed in Bahrain within the meaning of Bahrain Monetary Agency Regulations. All applications for investment should be received and any allotments should be made, in each case from outside of Bahrain. This document has been prepared for private information purposes of intended investors only who will be institutions. No invitation shall be made to the public in the Kingdom of Bahrain and this document will not be issued, passed to, or made available to the public generally. The Central Bank (CBB) has not reviewed, nor has it approved, this document or the marketing of such securities, derivatives or funds in the Kingdom of Bahrain. Accordingly, the securities, derivatives or funds may not be offered or sold in Bahrain or to residents thereof

All opinions and claims are based upon data on 2/23/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Deutsche Asset Management Investment GmbH

except as permitted by Bahrain law. The CBB is not responsible for performance of the securities, derivatives or funds.

State of Kuwait

This document has been sent to you at your own request. This presentation is not for general circulation to the public in Kuwait. The Interests have not been licensed for offering in Kuwait by the Kuwait Capital Markets Authority or any other relevant Kuwaiti government agency. The offering of the Interests in Kuwait on the basis a private placement or public offering is, therefore, restricted in accordance with Decree Law No. 31 of 1990 and the implementing regulations thereto (as amended) and Law No. 7 of 2010 and the bylaws thereto (as amended). No private or public offering of the Interests is being made in Kuwait, and no agreement relating to the sale of the Interests will be concluded in Kuwait. No marketing or solicitation or inducement activities are being used to offer or market the Interests in Kuwait.
