

Equity

We keep on riding our young Materials race

Our young Materials race is still on track. But now we are riding on both horses – chemicals and miners.

In mid-July we have upgraded the materials sector to overweight after a long period of neutral weighting. This upgrade was mainly based on the metals-and-mining subsector which we upgraded already a month earlier. We believe that the sector has successfully undergone a restructuring and shown surprising capital discipline. Balance sheets have been repaired and are now strong enough to increase or re-start meaningful pay-outs. This self-help story is meeting benign market conditions. The U.S. dollar weakness and macroeconomic stability in China have both contributed to the recent recovery in commodity prices. The solid reporting season has confirmed this positive picture. While the sector has gained more than 50% since its recent low in January 2016, it still trades 32% below its peak from 2008.

These numbers, however, become much more impressive when looking at the subsectors of the materials index we are using. In the MSCI ACWI Materials Index, the chemical subsector accounts for more than half of the index's market capitalization, and the metals-and-mining subsector for roughly one third. Considered highly cyclical itself, the volatility of the chemicals pales in comparison to that of metals and mining. The latter has lost more than 80% since its peak and only reached its trough last year while chemicals already troughed in 2009. Since January 2016 the metals-and-mining index more than doubled in value, which still leaves it more than 60% below its 2008 peak. The chemicals index, on the other hand, currently trades at record highs, 22% above its 2008 peak. This further illustrates the discrepancies within the materials sector. In fact, the correlation coefficient of those two subsectors has been a meager 0.57 over the past 20 years. That number increases to 0.86, however, if only considering the last two years.

Since our upgrade, the metals-and-mining subsector has performed particularly well. Combined with some cyclical short-term headwinds that we see arising, this makes the subsector vulnerable to temporary setbacks, notwithstanding our positive mid-term view. Chemicals, on the other hand, have shown a strong set of second-quarter figures and are benefiting from increased corporate activity. As prices and hence valuations of some of our preferred names especially in Europe have come down since mid-June, we now see this subsector as an equally strong driver of the materials sector as metals and mining.

With metals and mining being the real swing factor of this sector, however, this is where we will put the focus on in this report. Chemicals, as a side note, have performed well over the past years, but almost exactly in line with global stock markets, when looking at the past nine years.

Andre Koettner
Global Co-Head of Equities

Thomas Schuessler
Global Co-Head of Equities

In a nutshell

- Our July upgrade of the materials sector was mainly based on our previous call on metals-and-mining companies. We are now basing our call on the chemicals subsector as well.
- While the miners' restructuring story is intact, we see potential headwinds in the short term. After their strong recent rally, the sector might be vulnerable to disappointments.
- Chemicals have recently shown strong results. Some of our preferred European names have retreated enough in the past two months to make valuation interesting again.

Metals and mining – a typical boom-and-bust industry

The metals-and-mining subsector is a perfect example of an industry that is not only prone to cyclicity but also to full-blown boom-and-bust cycles. This comes as a result of the price-driven commodity sector with high capital intensity and long capital-expenditure (capex) cycles. When demand and prices are rising, the companies typically increase their capacities to capitalize on this rise. With new projects/mines taking up to 7 years to be established, capacity built in a high-demand environment could end up entering production when this demand cools off. Excess capacity in a declining market exacerbates the price decline which in turn leads to sharply reduced capex or even players leaving the market altogether. Once demand picks up again eventually, as a result of the sharp decline in prices, it meets an underinvested supply side that might need years to add necessary demand. In the meantime, commodity prices explode.

Parallel to normal cycles, many commodities also experience so-called super cycles, sometimes stretching over several decades. Typically, a super cycle is prompted by a large demand shock combined with a delayed response on the supply side. The most recent, prominent and still all-apparent demand shock was the rapid industrialization of China which resulted from major economic reforms and began in the late 1990s. The rapid economic growth led to huge increases in the demand and prices for most base metals. Even the global financial crisis seemed to only temporarily stop this demand surge as the price for iron ore, for example, almost regained its pre-crisis level as soon as 2010. Unsurprisingly, this environment helped little to stop the subsector's appetite for heavy investing and mergers and acquisitions (M&A). Eventually, this appetite ended in the "bust" part of the boom-and-bust cycle, as high capacity and stretched balance sheets met with declining prices: iron ore lost three quarters of its value between 2011 and 2015 (we take iron ore as a proxy for most major commodities, as commodity-price patterns are similar and iron ore is the dominant commodity in our mining universe).

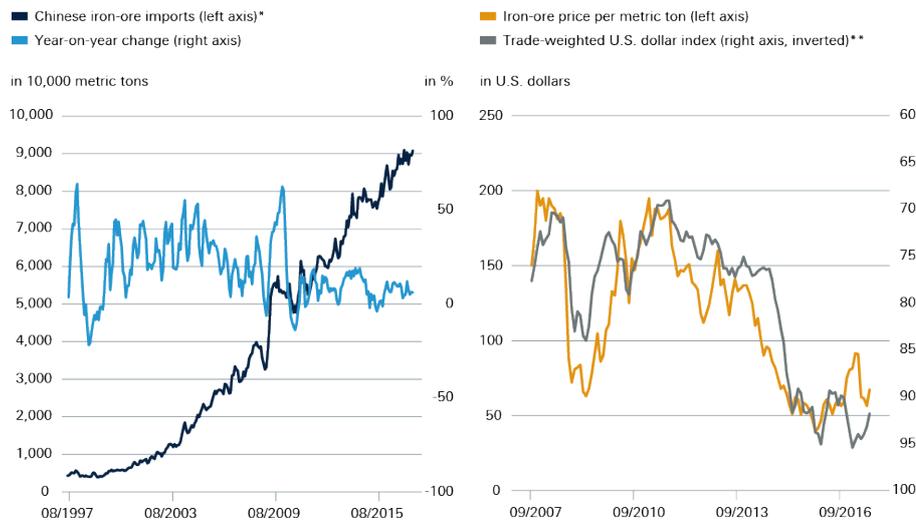

With the subsector scaling down investments from 2013 onwards and demand from China holding up well, prices found their bottom at the beginning of 2016. Currently accounting for over half of the global iron-ore demand, China is the dominant force not only for iron ore but also for most other major commodities as well.

Before we delve into China's economic prospects, we also need to discuss the U.S. dollar's impact on commodity demand and prices. Like for most commodities, iron-ore prices are often quoted in U.S. dollars. Hence, a strengthening dollar usually leads to a reduction of the buying power of foreign buyers, which in turn can weigh on overall demand and hence on prices. The relationship between price and dollar strength has been particularly pronounced in the past ten years, as the right chart below shows. The end of the dollar rally in 2015 and its recent weakness have certainly contributed to the sector's turnaround.

China's steady-paced demand growth and the dollar's hold on commodity prices

Source: Thomson Reuters Datastream; as of 8/15/17

*Three-month moving average

**Trade-weighted average of the U.S. dollar relative to other major currencies

On the demand side, China now towers aloft the world's iron-ore demand: compared to just 18% in 2002, China accounted for roughly 50% of the world's demand of iron ore (and most other base metals) in 2015.¹ As iron-ore imports show, Chinese demand has slowed from the high growth rates seen until 2010 but has nevertheless still achieved decent rates since 2011. Strong trade data in June and July show iron-ore imports beating consensus expectations. This leads us to believe that China's overall iron-ore demand in 2017 is well under way to exceeding 2016's record-breaking 1bn tons (t). Overall, infrastructure construction seems robust and fixed-asset investments continue to paint a stable macroeconomic environment for now. In the long term, however, we, as well as most investors, expect levels to normalize as China might not be willing and able to keep this pace of investments.

On the supply side, China dominates some commodities as well, most notably iron ore, where it accounts for roughly half of global capacity. The Chinese government's closure of illegal mining-and-production sites since the beginning of this year has taken out capacity. This could prove beneficial for the subsector as the targeted steel mills use scrap metal as the cheaper but lower-quality substitute for iron ore. Nonetheless, there is still a continued increase of scrap-metal usage, which in the longer term might weigh on iron-ore prices.

Our economic and market forecasts

We have a positive view on global growth as we see a clear acceleration compared to 2016. Our forecast stands at 3.5% for 2017 (after 3.1% in 2016), and 3.7% for 2018. Emerging markets should continue to grow at a faster pace of around 4.9%. We were surprised by China's strong performance in the first half which led us to increase our full-year 2017 gross-domestic-product (GDP)

¹Bank of Canada, *Commodity Price Supercycles: What Are They and What Lies Ahead?*, Bank of Canada Review Autumn 2016. Data in report from: World Bureau of Metal Statistics, US Geological Survey, Haver Analytics and Bank of Canada calculations, as of 2015

growth forecast from 6.3 to 6.5% in June. We might have to lift this figure up on the back of continued strong numbers pouring in from the Chinese economy, boding well for iron-ore demand. We expect the price to average around \$60/t for 2018 – less pessimistic than consensus expectations.

Relative performance vs. MSCI AC World Index

Source: Thomson Reuters Datastream; as of 8/15/17

Our equity outlook for the next twelve months remains constructive, as we still struggle to see meaningful factors that could end the current cycle. We have a bias towards cyclical sectors (next to materials we also like financials and technology) and towards Europe and emerging markets. The above chart shows three things:

1. Periods of out/underperformance can spread over many years.
2. While chemicals almost moved in line with the global equity market, metals and mining proved to be an extremely-high-beta subsector.
3. Metals and mining started their comeback in early 2016, but experienced a major setback in the first half of 2017. The impressive performance over the past weeks has prompted us to become a little cautious in the short term as we believe that further setbacks are possible. In the medium term, however, we expect the sector to further outperform the market mainly as a result of strengthened balance sheets and cash flows as well as an improved supply-demand profile. Operating profit margins (EBITDA) of key metals-and-mining companies for example are well under way to reach their 2011 levels again. Profitability was further enhanced by the resurgence of iron-ore prices. The current price of \$73/t (Bloomberg Finance L.P., as of 8/16/17) compares to average cash costs of around \$30/t for the largest players. Resisting old habits, miners have nevertheless shown a surprising spending discipline: Over the same period, combined capex of the key miners has fallen significantly from \$63.4bn in 2012 to an expected \$23.8bn for the current year.² Next to increasing cash flows as well as the potential for payouts, these improved metrics might also reduce the subsector's risk premium, as the decreased leverage might also decrease its beta.

All opinions and claims are based upon data on 8/18/17 and may not come to pass. Deutsche Asset Management Investment GmbH

²Morgan Stanley Research, as of 7/27/2017

Valuation

We believe that for tactical considerations valuation is not the dominant share-price driver for a cyclical subsector such as metals and mining. Our positive mid-term outlook for the sector, however, is underpinned by favorable valuations and an improving payout profile.

The World Datastream Mining index's price-to-book ratio currently trades at 75% of the Datastream World Index ratio. This compares to the long-term average of approx. 110%. This is, however, less attractive than it seems, as when it comes to the return on equity, the miners' discount to the world index is even higher. The relative price-to-earnings (P/E) ratio doesn't qualify as an immediate trigger, either, as it stands exactly at its long-term average of 100% to the global index. Compared to its own P/E history (back to 1987), the subsector trades at its long term average as well.

Our favored measure, however, is the free cash flow (FCF) yield. At current iron-ore spot prices, this year's FCF yield could reach 13%. This figure is more than twice the current dividend yield, illustrating the sector's potential for further dividend increases. In fact some major companies have announced plans to resume or increase dividend payouts as well as share buybacks in the most recent reporting season.

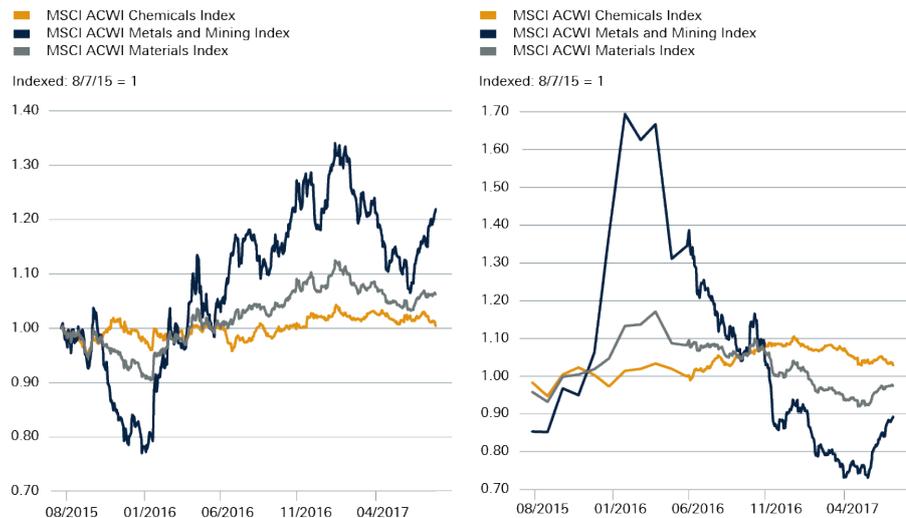

In the short term, we see a mixed picture for the miners. While positioning of professional investors is favorable – they still avoid the sector³ -, we see some headwinds: the sector's strong absolute and relative performance over the past two months; still high iron-ore stock levels in China; a stabilizing U.S. dollar, and Beijing's moves to curb speculation in commodities. The latter could seriously weigh on iron-ore prices as we believe that speculation has played an important part in the sudden price recovery since mid-June. These are the main reasons why we do not favor this subsector over chemicals any more.

All opinions and claims are based upon data on 8/18/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. All articles are available on <https://deutscheam.com/cio-view>

Relative performance (left) and relative P/ E ratio (right) vs. MSCI AC World Index

Source: FactSet Research Systems Inc.; as of 8/9/17

We are maintaining our overweight on the materials sector, however, as chemicals have shown a better-than-expected second quarter. Next to benefiting from the cyclical acceleration of the global economy, chemicals also profit from increased M&A activities as well as from growing interest from activist investors. Furthermore, the recent drawback especially of some of our preferred European names have made valuations more reasonable again. The Stoxx Europe 600 Chemicals has lost 7.3% between its peak on June 19th and August 17th. We believe investors could be positively surprised by the operating-margin development in the second half of the year. By then, chemical companies could have passed through to customers the raw-material price increases they endured in the first half of the year.

Conclusion

"If history teaches us one thing, then that history teaches us nothing." One has to believe in these words from Peter Ustinov in order to stay positive on metals-and-mining companies in the longer term. Past years' capex discipline as well as recent discussions with company leaders give us some comfort that the sector has learned from past mistakes and that it will therefore not embark on another spending spree should demand and prices stay elevated. This belief, however, will encounter its first real test in 12-24 months' time, when miners (as we expect) are sitting on such an amount of cash that expansion and empire building could be the ever more tempting things to do. But, as our colleague Stephan Werner, global sector head of materials, puts it: "One might hope that the animal spirits will not kick in as usual as everyone should fear the end of China's super investment cycle. Then again, this development has been feared for years already but failed to materialize. For the next couple of quarters, however, we are confident that the CEOs will stay focused on keeping their house in order and investors happy."

Any signs of the Chinese investments tumbling, or the dollar strengthening significantly would of course be bad news that the sector's leaders could neither control nor escape.

Glossary

Capital expenditures (capex)

Capital expenditure (Capex) are funds used by a company to acquire or upgrade physical assets such as property, industrial buildings or equipment.

Free Cash Flow (FCF)

Free Cash Flow (FCF) is a measure of financial performance calculated as operating cash flow minus capital expenditures. It shows how much cash a company is able to generate after deducting the money required to maintain or expand its asset base.

Gross domestic product (GDP)

The **gross domestic product (GDP)** is the monetary value of all the finished goods and services produced within a country's borders in a specific time period.

Mergers and acquisitions (M&A)

Mergers and acquisitions (M&A) are the two key methods of corporate consolidation. A merger is a combination of two companies to form a new company, while an acquisition is the purchase of one company by another in which no new company is formed.

MSCI ACWI Materials Index

The **MSCI ACWI Materials Index** captures large- and mid-cap companies classified in the materials sector across 23 developed- and 24 emerging-market countries.

Price-to-earnings (P/E) ratio or multiple

The **price-to-earnings (P/E) ratio** compares a company's current share price to its earnings per share.

Risk warning

Investments are subject to investment risk, including market fluctuations, regulatory change, possible delays in repayment and loss of income and principal invested. The value of investments can fall as well as rise and you might not get back the amount originally invested at any point in time.

Investments in Foreign Countries – Such investments may be in countries that prove to be politically or economically unstable. Furthermore, in the case of investments in foreign securities or other assets, any fluctuations in currency exchange rates will affect the value of the investments and any restrictions imposed to prevent capital flight may make it difficult or impossible to exchange or repatriate foreign currency.

Foreign Exchange/Currency – Such transactions involve multiple risks, including currency risk and settlement risk. Economic or financial instability, lack of timely or reliable financial information or unfavorable political or legal developments may substantially and permanently alter the conditions, terms, marketability or price of a foreign currency. Profits and losses in transactions in foreign exchange will also be affected by fluctuations in currency where there is a need to convert the product's denomination(s) to another currency. Time zone differences may cause several hours to elapse between a payment being made in one currency and an offsetting payment in another currency. Relevant movements in currencies during the settlement period may seriously erode potential profits or significantly increase any losses.

High Yield Fixed Income Securities – Investing in high yield bonds, which tend to be more volatile than investment grade fixed income securities, is speculative. These bonds are affected by interest rate changes and the creditworthiness of the issuers, and investing in high yield bonds poses additional credit risk, as well as greater risk of default.

Hedge Funds – An investment in hedge funds is speculative and involves a high degree of risk, and is suitable only for “Qualified Purchasers” as defined by the US Investment Company Act of 1940 and “Accredited Investors” as defined in Regulation D of the 1933 Securities Act. No assurance can be given that a hedge fund's investment objective will be achieved, or that investors will receive a return of all or part of their investment.

Commodities – The risk of loss in trading commodities can be substantial. The price of commodities (e.g., raw industrial materials such as gold, copper and aluminium) may be subject to substantial fluctuations over short periods of time and may be affected by unpredicted international monetary and political policies. Additionally, valuations of commodities may be susceptible to such adverse global economic, political or regulatory developments. Prospective investors must independently assess the appropriateness of an investment in commodities in light of their own financial condition and objectives. Not all affiliates

All opinions and claims are based upon data on 8/18/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Deutsche Asset Management Investment GmbH

or subsidiaries of Deutsche Bank Group offer commodities or commodities-related products and services.

Investment in private equity funds is speculative and involves significant risks including illiquidity, heightened potential for loss and lack of transparency. The environment for private equity investments is increasingly volatile and competitive, and an investor should only invest in the fund if the investor can withstand a total loss. In light of the fact that there are restrictions on withdrawals, transfers and redemptions, and the Funds are not registered under the securities laws of any jurisdictions, an investment in the funds will be illiquid. Investors should be prepared to bear the financial risks of their investments for an indefinite period of time.

Investment in real estate may be or become nonperforming after acquisition for a wide variety of reasons. Nonperforming real estate investment may require substantial workout negotiations and/ or restructuring.

Environmental liabilities may pose a risk such that the owner or operator of real property may become liable for the costs of removal or remediation of certain hazardous substances released on, about, under, or in its property. Additionally, to the extent real estate investments are made in foreign countries, such countries may prove to be politically or economically unstable. Finally, exposure to fluctuations in currency exchange rates may affect the value of a real estate investment.

Structured solutions are not suitable for all investors due to potential illiquidity, optionality, time to redemption, and the payoff profile of the strategy. We or our affiliates or persons associated with us or such affiliates may: maintain a long or short position in securities referred to herein, or in related futures or options, purchase or sell, make a market in, or engage in any other transaction involving such securities, and earn brokerage or other compensation. Calculations of returns on the instruments may be linked to a referenced index or interest rate. In such cases, the investments may not be suitable for persons unfamiliar with such index or interest rates, or unwilling or unable to bear the risks associated with the transaction. Products denominated in a currency, other than the investor's home currency, will be subject to changes in exchange rates, which may have an adverse effect on the value, price or income return of the products. These products may not be readily realizable investments and are not traded on any regulated market..

No representation or warranty is made by Deutsche Bank as to the reasonableness or completeness of such forward looking statements or to any other financial information contained herein. The terms of any investment will be exclusively subject to the detailed provisions, including risk considerations, contained in the Offering Documents. When making an investment decision, you should rely on the final documentation relating to the transaction and not the summary contained herein.

This document may not be reproduced or circulated without our written authority. The manner of circulation and distribution of this document may be restricted by law or regulation in certain countries, including the United States. This document is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction, including the United States, where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Deutsche Bank to any registration or licensing requirement within such jurisdiction not currently met within such jurisdiction. Persons into whose possession this document may come are required to inform themselves of, and to observe, such restrictions.

Kingdom of Bahrain

For Residents of the Kingdom of Bahrain: This document does not constitute an offer for sale of, or participation in, securities, derivatives or funds marketed in Bahrain within the meaning of Bahrain Monetary Agency Regulations. All applications for investment should be received and any allotments should be made, in each case from outside of Bahrain. This document has been prepared for private information purposes of intended investors only who will be institutions. No invitation shall be made to the public in the Kingdom of Bahrain and this document will not be issued, passed to, or made available to the public generally. The Central Bank (CBB) has not reviewed, nor has it approved, this document or the marketing of such securities, derivatives or funds in the Kingdom of Bahrain. Accordingly, the securities, derivatives or funds may not be offered or sold in Bahrain or to residents thereof

All opinions and claims are based upon data on 8/18/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Deutsche Asset Management Investment GmbH

except as permitted by Bahrain law. The CBB is not responsible for performance of the securities, derivatives or funds.

State of Kuwait

This document has been sent to you at your own request. This presentation is not for general circulation to the public in Kuwait. The Interests have not been licensed for offering in Kuwait by the Kuwait Capital Markets Authority or any other relevant Kuwaiti government agency. The offering of the Interests in Kuwait on the basis a private placement or public offering is, therefore, restricted in accordance with Decree Law No. 31 of 1990 and the implementing regulations thereto (as amended) and Law No. 7 of 2010 and the bylaws thereto (as amended). No private or public offering of the Interests is being made in Kuwait, and no agreement relating to the sale of the Interests will be concluded in Kuwait. No marketing or solicitation or inducement activities are being used to offer or market the Interests in Kuwait.
