

Investment traffic lights

Our tactical and strategic view

General market overview

Looking around, you might well be asking yourself: Is it Christmas already? Rest assured that there are still seven weeks to go. However, this has neither discouraged shops from already selling their Christmas merchandise nor investors from starting the year-end rally. The markets continue to race from one peak to the next. October proved to be another benign month across most asset classes. Equity markets experienced strong performance across pretty much all regions. In local-currency terms, the Nikkei led with 8.1% total return, followed by the Dax with 3.1%. Among emerging markets, Latin America declined slightly, but Asian equity markets did very well. Emerging-market bonds saw declines across most regions, mainly, it appears, due to a stronger dollar. The greenback gained 1.6% against the trade-weighted currency basket¹. Leaving emerging markets aside, fixed income had a pretty solid month, in particular as far as corporate bonds were concerned.

Once again, this was partly driven by strong economic growth in virtually all regions. So far, we have also had another strong earnings season. Technology firms were able to beat expectations particularly strongly.

Another important driver was once again monetary policy. Heading into October, that was hardly a given. Throughout the month, investors were left to wonder who would succeed Janet Yellen as the chair of the U.S. Federal Reserve (Fed). This occasionally led to market nervousness, based on fears President Trump might choose a more hawkish successor. Trump waited until November 3rd. With the benefit of hindsight, we – and along with most other market participants – were right to expect policy continuity. In the end, Trump decided to nominate Jerome Powell, who has already served alongside Yellen on the Fed and is likely to continue along the Fed's recent policy path. Talking about continuity, the term also describes well what to expect at the Bank of Japan (BOJ). Following the election victory of Prime Minister Shinzo Abe, BOJ president Haruhiko Kuroda is likely to see his tenure renewed for another term. Meanwhile, the European Central Bank (ECB) skillfully avoided rocking the boat at its long-awaited October meeting. Draghi confirmed that asset purchases would start to shrink in 2018. Beyond that, however, the ECB has kept all its options open. The only outlier was the Bank of England (BoE), who has had to raise interest rates for the first time in ten years. This has less to do with underlying economic momentum in the United Kingdom, than with a weaker pound driving up inflation. Whether this was the right move remains to be seen. Further delays in gaining clarity on the Brexit process could damage market confidence.

All opinions and claims are based upon data on 11/6/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Alternative investments may be speculative and involve significant risks including illiquidity, heightened potential for loss and lack of transparency. Alternatives are not suitable for all clients. **Past performance is not indicative of future returns.** Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Investments come with risk. The value of an investment can fall as well as rise and your capital may be at risk. You might not get back the amount originally invested at any point in time. Deutsche Asset Management Investment GmbH

¹The Trade Weighted U.S. Dollar Index depicts the value of the dollar against a currency basket using the trade-weighted average of 26 currencies.

Delays can also be seen in the formation of the next German government. Another political issue investors are watching is the tense situation in Catalonia with parts of the population aspiring independency from Spain. In China, Xi Jinping has succeeded in increasing his power at the People's Congress considerably. This could temporarily speed up political decision-making. Nevertheless, we are slightly skeptical about how well such a concentration of power will serve markets in the long run. For one thing, it will not necessarily translate into a further opening and liberalization of the Chinese economy and capital markets.

Outlook and changes in positioning

Overall, we expect markets to continue trending upwards in the coming months. We have some concerns, however, regarding U.S. equities, which we have put on underweight. The tax reform continues to face numerous obstacles. Moreover, Washington is once more distracted by political turbulences, including the investigations by Special Counsel Robert Mueller and the recent charges he pressed against some former aids in the 2016 Trump campaign.

In terms of underlying fundamentals, however, we consider global equity markets to be well supported. Earnings and sentiment indicators remain solid across most major markets. Such strongly synchronized trends are unusual – and reassuring. In terms of regional preferences, the main change among equity allocations has been putting Japan on overweight. Political uncertainty here has faded, while earnings expectations continue to rise. In terms of sector preferences, we continue to stick to our preference for raw materials, finance and technology.

On the fixed-income side, our positions have not changed much either. At current yield levels, we are cautious on 10-year German Bunds, and neutral at both the very short and the very long end. With regard to sovereign bonds from the Eurozone's periphery, we may continue to see some trading opportunities, depending on how the situation in Catalonia continues to evolve, as well as on economic and political developments in Italy. For now, we prefer maturities in the 5- to 7-year range. We have also put euro high-yield bonds on overweight. For U.S. Treasuries, we remain neutral, but tend to view them with a little more skepticism.

As we expected, the euro has stopped its ascent against the dollar. While the interest-rate differential as measured by two-year bonds from Germany and the United States is very wide by historic standards and augurs well for the dollar, the political momentum is less supportive. For the rest of November, neither the ECB nor the Fed is scheduled to release market-moving information. Investors are more likely to focus on political developments. The issue of Catalonia is unlikely to go away. November could also pass without much tangible progress on the Brexit process. And far as U.S. tax reform is concerned, there remains scope for disappointment in terms of both the timing and the content of the final package.

All opinions and claims are based upon data on 11/6/17 and may not come to pass. Comments regarding our tactical and strategic view

Tactical view:

- The focus of our tactical view for fixed income is on trends in bond prices, not yields.

Strategic view:

- The focus of our strategic view for sovereign bonds is on yields, not trends in bond prices.
- For corporates and securitized/specialties bonds, the arrows depict the respective option-adjusted spread.
- For bonds not denominated in euros, the illustration depicts the spread in comparison with U.S. Treasuries. For bonds denominated in euros, the illustration depicts the spread in comparison with German Bunds.
- For emerging-market sovereign bonds, the illustration depicts the spread in comparison with U.S. Treasuries.
- Both spread and yield trends influence the bond value. Investors who aim to profit only from spread trends should hedge against changing interest rates.

Glossary

Bank of England (BoE)

The Bank of England (BoE) is the central bank of the United Kingdom.

Bank of Japan (BOJ)

The **Bank of Japan (BOJ)** is the central bank of Japan.

Brexit

Brexit is a combination of the words "Britain" and "Exit" and describes the possible exit of the United Kingdom of the European Union.

Bunds

Bunds is a commonly used term for bonds issued by the German federal government with a maturity of 10 years

Dax

The **Dax** is a blue-chip stock-market index consisting of the 30 major German companies trading on the Frankfurt Stock Exchange.

Emerging markets (EM)

Emerging markets (EM) are economies not yet fully developed in terms of, amongst others, market efficiency and liquidity.

European Central Bank (ECB)

The **European Central Bank (ECB)** is the central bank for the Eurozone.

Eurozone

The **Eurozone** is formed of 19 European Union member states that have adopted the euro as their common currency and sole legal tender.

Greenback

Greenback is a commonly used expression for the U.S. dollar.

High Yield (HY)

High-yield bonds are issued by below-investment-grade-rated issuers and usually offer a relatively high yield.

Nikkei 225

The Nikkei 225 is a price-weighted index of Japan's 225 most important listed companies.

Periphery

Periphery countries are less developed than the core countries of a specific region. In the Eurozone, the euro periphery consists of

Risk warning

Investments are subject to investment risk, including market fluctuations, regulatory change, possible delays in repayment and loss of income and principal invested. The value of investments can fall as well as rise and you might not get back the amount originally invested at any point in time.

Investments in Foreign Countries – Such investments may be in countries that prove to be politically or economically unstable. Furthermore, in the case of investments in foreign securities or other assets, any fluctuations in currency exchange rates will affect the value of the investments and any restrictions imposed to prevent capital flight may make it difficult or impossible to exchange or repatriate foreign currency. Foreign Exchange/Currency – Such transactions involve multiple risks, including currency risk and settlement risk. Economic or financial instability, lack of timely or reliable financial information or unfavorable political or legal developments may substantially and permanently alter the conditions, terms, marketability or price of a foreign currency. Profits and losses in transactions in foreign exchange will also be affected by fluctuations in currency where there is a need to convert the product's denomination(s) to another currency. Time zone differences may cause several hours to elapse between a payment being made in one currency and an offsetting payment in another currency. Relevant movements in currencies during the settlement period may seriously erode potential profits or significantly increase any losses.

High Yield Fixed Income Securities – Investing in high yield bonds, which tend to be more volatile than investment grade fixed income securities, is speculative. These bonds are affected by interest rate changes and the creditworthiness of the issuers, and investing in high yield bonds poses additional credit risk, as well as greater risk of default.

Hedge Funds – An investment in hedge funds is speculative and involves a high degree of risk, and is suitable only for “Qualified Purchasers” as defined by the US Investment Company Act of 1940 and “Accredited Investors” as defined in Regulation D of the 1933 Securities Act. No assurance can be given that a hedge fund's investment objective will be achieved, or that investors will receive a return of all or part of their investment. Commodities – The risk of loss in trading commodities can be substantial. The price of commodities (e.g., raw industrial materials such as gold, copper and aluminium) may be subject to substantial fluctuations over short periods of time and may be affected by unpredicted international monetary and political policies. Additionally, valuations of commodities may be susceptible to such adverse global economic, political or regulatory developments. Prospective investors must independently assess the appropriateness of an investment in commodities in light of their own financial condition and objectives. Not all affiliates or subsidiaries of Deutsche Bank Group offer commodities or commodities-related products and services.

All opinions and claims are based upon data on 11/6/17 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Alternative investments may be speculative and involve significant risks including illiquidity, heightened potential for loss and lack of transparency. Alternatives are not suitable for all clients. **Past performance is not indicative of future returns.** Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. Investments come with risk. The value of an investment can fall as well as rise and your capital may be at risk. You might not get back the amount originally invested at any point in time. Deutsche Asset Management Investment GmbH

Investment in private equity funds is speculative and involves significant risks including illiquidity, heightened potential for loss and lack of transparency. The environment for private equity investments is increasingly volatile and competitive, and an investor should only invest in the fund if the investor can withstand a total loss. In light of the fact that there are restrictions on withdrawals, transfers and redemptions, and the Funds are not registered under the securities laws of any jurisdictions, an investment in the funds will be illiquid. Investors should be prepared to bear the financial risks of their investments for an indefinite period of time.

Investment in real estate may be or become nonperforming after acquisition for a wide variety of reasons. Nonperforming real estate investment may require substantial workout negotiations and/ or restructuring. Environmental liabilities may pose a risk such that the owner or operator of real property may become liable for the costs of removal or remediation of certain hazardous substances released on, about, under, or in its property. Additionally, to the extent real estate investments are made in foreign countries, such countries may prove to be politically or economically unstable. Finally, exposure to fluctuations in currency exchange rates may affect the value of a real estate investment.

Structured solutions are not suitable for all investors due to potential illiquidity, optionality, time to redemption, and the payoff profile of the strategy. We or our affiliates or persons associated with us or such affiliates may: maintain a long or short position in securities referred to herein, or in related futures or options, purchase or sell, make a market in, or engage in any other transaction involving such securities, and earn brokerage or other compensation. Calculations of returns on the instruments may be linked to a referenced index or interest rate. In such cases, the investments may not be suitable for persons unfamiliar with such index or interest rates, or unwilling or unable to bear the risks associated with the transaction. Products denominated in a currency, other than the investor's home currency, will be subject to changes in exchange rates, which may have an adverse effect on the value, price or income return of the products. These products may not be readily realizable investments and are not traded on any regulated market.
