

David Bianco  
Chief Investment Officer &  
Strategist, Americas

### In a nutshell

- Fed maintains quarterly hiking pace - we expect this expansion to continue well into the 2020s.
- Low bond yields support 18+ PE, but mind rising yields & peak EPS growth.
- ERP spread over credit spreads has been declining, but still attractive.
- The gap of HY spread vs. IG spread tightest since 1990.
- For 3Q earnings season, we expect companies' comments and estimates on the trade conflict impact to be much more cautionary.

All opinions and claims are based upon data on 10/1/18 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. DWS does not give tax advice. Tax treatment depends on individual circumstances and may be subject to change in the future. DWS Investment GmbH

## Americas CIO View

### Equities offer smaller, but still better risk premium than bonds

#### Fed maintains quarterly hiking pace: Is the neutral rate above or below 3%?

Last week, the U.S. Federal Reserve (the Fed) hiked by another quarter point to 2.0-2.25% as expected. The dot plot indicates one more hike in 2018 and three hikes in 2019. To us, there are a few signs that the Fed is getting close to the neutral rate: 1) the Fed dropped the "accommodative" language in the FOMC statement; 2) the 10y-2y Treasury yield spread is already under 25 basis points (bps); 3) the long-term federal funds target rate estimate is now 3.0%, below the 3.75% & 3.5% estimates at 2014 & 2015 end. The latest dot plot suggests the Fed will reach 3% at 2019 year-end. If the neutral federal funds rate is below 3% for this cycle, then the yield curve will likely go flat. A flat curve isn't a big worry, it just means that the long-term bond market thinks the federal funds rate is above what's needed to contain inflation. If inflation stays contained at about 2% then the Fed will be able to cut rates on the first sign of any economic slowing. Ending a hiking cycle by cutting rates upon slowing, but without a recession soon following is a classic soft landing. This has occurred: 1966, 1985, 1995. We think this likely occurs again in late 2019 or early 2020 and that this expansion continues well into the 2020s.

### Low bond yields support 18+ PE, but mind rising yields & peak EPS growth

Normally the cost of equity (CoE) is 300-400bps above Treasury yields, i.e. the equity risk premium (ERP). The S&P ERP is usually 200-250bps above investment grade (IG) credit spreads. This suggests that the nominal CoE should be 6.5% when the cost of long-term corporate debt is 4.25%. Large S&P firms of solid IG status can borrow for 10 years at 4.25% or 125bp over Treasury yields right now vs. 130bps average the last 30 years. This suggests a 2.25% real cost of debt if inflation is 2%. This plus a 200-250bps premium suggests a real cost of equity of ~4.5% for large S&P firms of solid IG status, which supports a 22 S&P PE on steady-state S&P EPS.

But, in our view, real borrowing rates will rise slowly along with higher Treasury Inflation Protected Securities (TIPS) yields as the Fed hikes rates through 2019. And we expect the S&P ERP to stay larger than normal vs. IG credit spreads as Fed hiking continues. Also, the ~25% S&P EPS growth in 2018 should slow to 5-7% in 2019 and beyond. To value the S&P 500, we use a 3.5% long-term Treasury yield plus a 400bps ERP (same as 1.5% investment grade (IG) credit spread plus 2.5% incremental risk premium), i.e. 7.5% nominal cost of equity or 5.5% real. This translates to an 18 price-to-earnings ratio (PE) on normal S&P EPS. At 18.6x our 2018E EPS,

the S&P is trading at a 5.4% offered real CoE, slightly richer than our fair value estimate.

### **ERP spread over credit spreads has been declining, but still attractive**

Strong S&P rally in the last two years squeezed the premium of S&P implied ERP vs. U.S. long-term IG credit spread by ~100bps from 4% to 3%. But it's still higher than the 2.2% average since 1987. Equities are more attractive to us than fixed income. We overweight equities and underweight fixed income with 63% and 32% allocations respectively. Within equities our CIO view is neutral on regions and sectors globally, but Emerging Markets (EM) Asia likely to offer the best returns in the next 12 months.

### **The gap of HY spread vs. IG spread tightest since 1990**

U.S. corporate spreads at both investment grade and high yield (HY) remain very tight (IG 125bps and HY 350bps). The bond market suggests that U.S. corporates can and have fared well around federal funds rate normalization. Under the new tax law, companies can use repatriated cash to retire some of their debt while also being able to boost dividend and buyback payouts. Currently, HY credit spread is only 215bps higher than IG credit spread, at low levels only touched several times in the last three decades: 1997, 2007, and 2014. We think the outperformance of HY over IG has run its course and the trend is likely to reverse in the next 12 months. We lowered high yield corporate credit allocation from 5% to 4% last week.

### **What to watch during 3Q earnings season?**

3Q earnings season reporting will start in two weeks. We expect S&P to deliver another quarter of 20%+ strong earnings-per-share (EPS) growth. But we think companies' comments and estimates on trade conflict impact will be much more cautionary especially for 2019 EPS despite having basically dismissed any material profit impact from tariff during 2Q reporting. We think the current ~\$180 consensus 2019 S&P EPS is too high. Normally S&P's next calendar year consensus EPS starts to get cut when the current calendar year is over, but this year the cuts might happen earlier given the new development on trade conflict. Other things to watch include signs of margin pressure, capital expenditure (capex) guidance and foreign exchange (FX) comments.

## Glossary

### Basis point

One **basis point** equals 1/100 of a percentage point.

### Capital expenditures (capex)

**Capital expenditure (Capex)** are funds used by a company to acquire or upgrade physical assets such as property, industrial buildings or equipment.

### Earnings per share (EPS)

**Earnings per share (EPS)** is calculated as a company's net income minus dividends of preferred stock, all divided by the total number of shares outstanding.

### Emerging markets (EM)

**Emerging markets (EM)** are economies not yet fully developed in terms of, amongst others, market efficiency and liquidity.

### Federal funds rate

The **federal funds rate** is the interest rate, set by the Fed, at which banks lend money to each other, usually on an overnight basis.

### High Yield (HY)

**High-yield** bonds are issued by below-investment-grade-rated issuers and usually offer a relatively high yield.

### Inflation

**Inflation** is the rate at which the general level of prices for goods and services is rising and, subsequently, purchasing power is falling.

### Investment grade (IG)

**Investment grade (IG)** refers to a credit rating from a rating agency that indicates that a bond has a relatively low risk of default.

### Nominal

In economics, a **nominal** value is not adjusted for inflation; a real value is.

### Price-to-earnings (P/E) ratio or multiple

The **price-to-earnings (P/E) ratio** compares a company's current share price to its earnings per share.

### Risk premium

The **risk premium** is the expected return on an investment minus the return that would be earned on a risk-free investment.

CRC 061408 (10/18)

## Spread

The **spread** is the difference between the quoted rates of return on two different investments, usually of different credit quality.

## Treasuries

**Treasuries** are fixed-interest U.S. government debt securities with different maturities: Treasury bills (1 year maximum), Treasury notes (2 to 10 years), Treasury bonds (20 to 30 years) and Treasury Inflation Protected Securities (TIPS) (5, 10 and 30 years).

## U.S. Federal Reserve Board (the Fed)

The **U.S. Federal Reserve Board**, often referred to as "**the Fed**", is the central bank of the United States.

## Risk warning

Investments are subject to investment risk, including market fluctuations, regulatory change, possible delays in repayment and loss of income and principal invested. The value of investments can fall as well as rise and you might not get back the amount originally invested at any point in time.

Investments in Foreign Countries – Such investments may be in countries that prove to be politically or economically unstable. Furthermore, in the case of investments in foreign securities or other assets, any fluctuations in currency exchange rates will affect the value of the investments and any restrictions imposed to prevent capital flight may make it difficult or impossible to exchange or repatriate foreign currency.

Foreign Exchange/Currency – Such transactions involve multiple risks, including currency risk and settlement risk. Economic or financial instability, lack of timely or reliable financial information or unfavorable political or legal developments may substantially and permanently alter the conditions, terms, marketability or price of a foreign currency. Profits and losses in transactions in foreign exchange will also be affected by fluctuations in currency where there is a need to convert the product's denomination(s) to another currency. Time zone differences may cause several hours to elapse between a payment being made in one currency and an offsetting payment in another currency. Relevant movements in currencies during the settlement period may seriously erode potential profits or significantly increase any losses.

High Yield Fixed Income Securities – Investing in high yield bonds, which tend to be more volatile than investment grade fixed income securities, is speculative. These bonds are affected by interest rate changes and the creditworthiness of the issuers, and investing in high yield bonds poses additional credit risk, as well as greater risk of default.

Hedge Funds – An investment in hedge funds is speculative and involves a high degree of risk, and is suitable only for “Qualified Purchasers” as defined by the US Investment Company Act of 1940 and “Accredited Investors” as defined in Regulation D of the 1933 Securities Act. No assurance can be given that a hedge fund's investment objective will be achieved, or that investors will receive a return of all or part of their investment.

Commodities – The risk of loss in trading commodities can be substantial. The price of commodities (e.g., raw industrial materials such as gold, copper and aluminium) may be subject to substantial fluctuations over short periods of time and may be affected by unpredicted international monetary and political policies. Additionally, valuations of commodities may be susceptible to such adverse global economic, political or regulatory developments. Prospective investors must independently assess the appropriateness of an investment in commodities in light of their own financial condition and objectives. Not all affiliates

CRC 061408 (10/18)

or subsidiaries of Deutsche Bank Group offer commodities or commodities-related products and services.

Investment in private equity funds is speculative and involves significant risks including illiquidity, heightened potential for loss and lack of transparency. The environment for private equity investments is increasingly volatile and competitive, and an investor should only invest in the fund if the investor can withstand a total loss. In light of the fact that there are restrictions on withdrawals, transfers and redemptions, and the Funds are not registered under the securities laws of any jurisdictions, an investment in the funds will be illiquid. Investors should be prepared to bear the financial risks of their investments for an indefinite period of time.

Investment in real estate may be or become nonperforming after acquisition for a wide variety of reasons. Nonperforming real estate investment may require substantial workout negotiations and/ or restructuring.

Environmental liabilities may pose a risk such that the owner or operator of real property may become liable for the costs of removal or remediation of certain hazardous substances released on, about, under, or in its property. Additionally, to the extent real estate investments are made in foreign countries, such countries may prove to be politically or economically unstable. Finally, exposure to fluctuations in currency exchange rates may affect the value of a real estate investment.

Structured solutions are not suitable for all investors due to potential illiquidity, optionality, time to redemption, and the payoff profile of the strategy. We or our affiliates or persons associated with us or such affiliates may: maintain a long or short position in securities referred to herein, or in related futures or options, purchase or sell, make a market in, or engage in any other transaction involving such securities, and earn brokerage or other compensation. Calculations of returns on the instruments may be linked to a referenced index or interest rate. In such cases, the investments may not be suitable for persons unfamiliar with such index or interest rates, or unwilling or unable to bear the risks associated with the transaction. Products denominated in a currency, other than the investor's home currency, will be subject to changes in exchange rates, which may have an adverse effect on the value, price or income return of the products. These products may not be readily realizable investments and are not traded on any regulated market.
