

Westminster in turmoil

Political uncertainty looks set to continue, not just when it comes to Brexit

Sometimes, it is better to remain silent than to speak up and remove all doubt about your ignorance. Having been inundated by comments on what to make of the latest twist in the Brexit drama, however, we too feel compelled to add our bit. Amidst all the recent turbulence, we believe three conclusions can already be drawn, none of them particularly comfortable for British financial markets.

1. British politics is in turmoil. It will take a while for the dust to settle.

It looks increasingly likely that Prime Minister Theresa May will face a leadership challenge within her conservative party. Her minority government has been weakened, perhaps fatally, by a series of resignations. That includes Dominic Raab, May's second Brexit secretary to quit within four months. The rollout of the draft deal the May government negotiated with Brussels was pretty disorganized, to put it mildly. And, while it is debatable whether any other prime minister might have negotiated a deal more favorable to British interests, Mrs. May has done very little to prepare either her party or the country for some harsh realities. That starts with the thorny issue of how to avoid border checks between Northern Ireland and the Republic of Ireland, even in the absence of a future trade agreement. May's opponents, including former foreign secretary Boris Johnson, were easily able to paint the resulting provisions as amounting to potentially condemning the United Kingdom to the status of a "vassal state".¹ Matters were not helped either by the absence of any substantive details on the future trading regime that might emerge after the transition period. It certainly appears that if the House of Commons were to ratify anything like the draft deal now proposed, the UK would lose much of its remaining bargaining power it might once have had in future trade talks.

2. Anyone claiming to know with any degree of comfort what will happen next is deluding themselves – and their readers.

Don't take our word for it. Here is how veteran Tory MP Ken Clarke put it on Thursday, when interviewed by the BBC's Radio 4 World at One program: "Nobody really knows what's going to happen from now on. The actual vote on this draft deal won't come for a few weeks yet and there is still some final negotiating to do. But at the moment, there is not the slightest chance of a parliamentary majority." When pressed on whether the deal might be softened, Clarke added: "Like everybody else from Theresa downwards, I think, I don't know. Nobody knows quite what happens next."²

²<https://www.bbc.co.uk/sounds/play/m00014kd>

To which we would only add that given the negative reception so far, it would not be surprising if May's draft deal never even gets to a parliamentary vote.

3. Political uncertainty looks set to continue, and not just in terms of Brexit negotiations.

A charitable view of what happened over the past week is that Westminster has actually moved closer to delivering on what voters might have wanted. On Brexit, only an admittedly sizeable minority was ever in favor of swiftly severing relations with the European Union (EU) altogether, by leaving without a deal. Polling, both before and after the 2016 referendum, has been pretty unambiguous on that. A larger group, of about half of voters has been broadly in favor of the status quo, perhaps on slightly amended terms notably on the movement of people. Back in 2016, the group that appears to have narrowly swung the referendum in favor of Brexit, felt it would be easier to secure concessions by exiting the EU. Unsurprisingly, such reluctant Brexiteers do not appear particularly pleased by the results May has been able to deliver. We would caution not to read too much into any one, early poll (especially given how unreliable British polling has been in the past). Still, it looks like only 14% would choose Brexit on the terms negotiated by the government, and only 32% would prefer to leave the EU without a deal. Over half - 54% - would prefer to remain in the EU.³ Give or take a few points, this is broadly consistent with what you might have expected.

The problem is that parliamentary politics is an imprecise way of aggregating voter preferences.⁴ Faced with legalistic, intransigent and increasingly impatient European partners, British brinkmanship paired with political chaos still risks delivering an outcome only relatively few voters ever wanted. And even if this can be avoided, there are worrying longer-term implications for investors. Under Theresa May, the Tories appear to once again be losing their reputation for being competent at managing the economy. Beyond Brexit, the electoral consequences could prove as significant and lasting as those of Black Wednesday of 1992, when markets forced the conservative government to withdraw the pound from the European Exchange Rate mechanisms. The difference is that this time around, the opposition Labour party is embracing a series of policies British businesses and financial markets would find deeply unnerving.

To sum up, from a market perspective, extreme outcomes have become more probable. That includes both outcomes that would prove detrimental to British financial markets and economic prospects (ie. a chaotic, hard Brexit) and more benign ones than we had previously expected. For example, it looks no longer so implausible that the UK might request an extension of EU membership, potentially followed by a second referendum.⁵ We have previously advised clients to stay on the sidelines, until Brexit-related political uncertainty recedes. In light of recent events, we can only reiterate that advice.

³<https://news.sky.com/story/majority-of-brits-now-against-brexit-and-back-second-eu-referendum-sky-data-poll-11555078>

⁴Referendums, especially on difficult, technical and uncertain issues, tend to do an even worse job, by creating the impression of clear, and immutable voter preferences.

⁵One factor that might favor such an outcome is that across the European continent, the politics on migration has shifted.

Glossary

Brexit

Brexit is a combination of the words "Britain" and "Exit" and describes the exit of the United Kingdom of the European Union.

European Union (EU)

The **European Union (EU)** is a political and economic union of 28 member states located primarily in Europe.

Pound sterling (GBP)

The **pound sterling (GBP)**, or simply the pound, is the official currency of the United Kingdom and its territories.

All opinions and claims are based upon data on 11/16/18 and may not come to pass. Risk warning

Investments are subject to investment risk, including market fluctuations, regulatory change, possible delays in repayment and loss of income and principal invested. The value of investments can fall as well as rise and you might not get back the amount originally invested at any point in time.

Investments in Foreign Countries – Such investments may be in countries that prove to be politically or economically unstable. Furthermore, in the case of investments in foreign securities or other assets, any fluctuations in currency exchange rates will affect the value of the investments and any restrictions imposed to prevent capital flight may make it difficult or impossible to exchange or repatriate foreign currency.

Foreign Exchange/Currency – Such transactions involve multiple risks, including currency risk and settlement risk. Economic or financial instability, lack of timely or reliable financial information or unfavorable political or legal developments may substantially and permanently alter the conditions, terms, marketability or price of a foreign currency. Profits and losses in transactions in foreign exchange will also be affected by fluctuations in currency where there is a need to convert the product's denomination(s) to another currency. Time zone differences may cause several hours to elapse between a payment being made in one currency and an offsetting payment in another currency. Relevant movements in currencies during the settlement period may seriously erode potential profits or significantly increase any losses.

High Yield Fixed Income Securities – Investing in high yield bonds, which tend to be more volatile than investment grade fixed income securities, is speculative. These bonds are affected by interest rate changes and the creditworthiness of the issuers, and investing in high yield bonds poses additional credit risk, as well as greater risk of default.

Hedge Funds – An investment in hedge funds is speculative and involves a high degree of risk, and is suitable only for “Qualified Purchasers” as defined by the US Investment Company Act of 1940 and “Accredited Investors” as defined in Regulation D of the 1933 Securities Act. No assurance can be given that a hedge fund's investment objective will be achieved, or that investors will receive a return of all or part of their investment.

Commodities – The risk of loss in trading commodities can be substantial. The price of commodities (e.g., raw industrial materials such as gold, copper and aluminium) may be subject to substantial fluctuations over short periods of time and may be affected by unpredicted international monetary and political policies. Additionally, valuations of commodities may be susceptible to such adverse global economic, political or regulatory developments. Prospective investors must independently assess the appropriateness of an investment in commodities in light of their own financial condition and objectives. Not all affiliates

or subsidiaries of Deutsche Bank Group offer commodities or commodities-related products and services.

Investment in private equity funds is speculative and involves significant risks including illiquidity, heightened potential for loss and lack of transparency. The environment for private equity investments is increasingly volatile and competitive, and an investor should only invest in the fund if the investor can withstand a total loss. In light of the fact that there are restrictions on withdrawals, transfers and redemptions, and the Funds are not registered under the securities laws of any jurisdictions, an investment in the funds will be illiquid. Investors should be prepared to bear the financial risks of their investments for an indefinite period of time.

Investment in real estate may be or become nonperforming after acquisition for a wide variety of reasons. Nonperforming real estate investment may require substantial workout negotiations and/ or restructuring.

Environmental liabilities may pose a risk such that the owner or operator of real property may become liable for the costs of removal or remediation of certain hazardous substances released on, about, under, or in its property. Additionally, to the extent real estate investments are made in foreign countries, such countries may prove to be politically or economically unstable. Finally, exposure to fluctuations in currency exchange rates may affect the value of a real estate investment.

Structured solutions are not suitable for all investors due to potential illiquidity, optionality, time to redemption, and the payoff profile of the strategy. We or our affiliates or persons associated with us or such affiliates may: maintain a long or short position in securities referred to herein, or in related futures or options, purchase or sell, make a market in, or engage in any other transaction involving such securities, and earn brokerage or other compensation. Calculations of returns on the instruments may be linked to a referenced index or interest rate. In such cases, the investments may not be suitable for persons unfamiliar with such index or interest rates, or unwilling or unable to bear the risks associated with the transaction. Products denominated in a currency, other than the investor's home currency, will be subject to changes in exchange rates, which may have an adverse effect on the value, price or income return of the products. These products may not be readily realizable investments and are not traded on any regulated market.
