

Joshua N. Feinman  
U.S. Chief Economist

### In a nutshell

- FOMC participants still judge the economy as performing quite well
- The FOMC also acknowledges the recent tightening of financial conditions and moderation / uncertainty abroad
- I continue to expect the Fed balance sheet to run off passively in the background, according to the schedule the Fed laid out more than a year ago

All opinions and claims are based upon data on 12/19/18 and may not come to pass. This information is subject to change at any time, based upon economic, market and other considerations and should not be construed as a recommendation. Past performance is not indicative of future returns. Forecasts are not a reliable indicator of future returns. Forecasts are based on assumptions, estimates, opinions and hypothetical models that may prove to be incorrect. All opinions and claims are based upon data on 12/19/18 and may not come to pass. ## A Viewpoint from Joshua N. Feinman

### FOMC decision

As we expected, the Federal Open Market Committee (FOMC) raised the federal funds rate target by 25 basis points (bps), to 2-1/4% to 2-1/2%, the ninth such hike in this cycle. Of key importance is the messaging that accompanied today's move. Here, I see several important takeaways:

FOMC participants still judge the economy as performing quite well, and see the economic outlook as solid, consistent with achieving their dual-mandate objectives (if not a bit beyond in terms of full employment). And they still judge monetary policy as (slightly) accommodative. That's why they felt it appropriate to take another modest step to reduce that accommodation today.

But they also acknowledged a number of developing crosscurrents – most notably, the recent tightening of financial conditions, and some moderation or uncertainties abroad – that, if sustained, may weigh slightly on the base-case outlook for the U.S. economy, and raise some downside risks. Also, after today's move they now judge the federal funds rate to be back at least at the bottom of the (admittedly uncertain) range of estimates of neutral. These developments imply two main things going forward: policymakers expect they will need to do slightly less in terms of rate hikes from here (largely because of the impact of the recent tightening of financial conditions and moderation abroad); and they are apt to be even more data dependent than before. Of course, the U.S. Federal Reserve (Fed) policy is never on a pre-set course. But with the increased uncertainties caused by tighter financial conditions and developments abroad, and with policy no longer so clearly accommodative, the case for treading carefully, monitoring developments closely, and letting incoming information dictate the pace and timing of future moves, is even stronger. Little sign of an inflation overshoot gives the Fed still greater latitude to be patient.

A few more details reinforce these conclusions. In the statement, the Committee now "judges" rather than "expects" that "some further gradual increases in the target range for the funds rate..." - adding the modifier "some" to the prior meeting's statement. These changes are FedSpeak<sup>1</sup> for slightly tempering the pace, magnitude, and likelihood of hikes they anticipate. Consistent with that, the median "dots" slipped to two hikes from three in 2019 (the average fell as well), and though holding at one further hike in 2020, the long-run median estimate of neutral edged down slightly.

Also, the statement added that the FOMC "... will continue to monitor global economic and financial developments and assess their implications for the economic outlook." This is a nod to acknowledging the recent tightening of financial conditions and moderation or uncertainty abroad, which was why the median

<sup>1</sup>Informal term which is used to refer to the statements and the language that the Federal Reserve uses to describe future changes in Federal Reserve Policy.

expectation for gross-domestic-product (GDP) growth came down 0.2% in 2019 to 2.3% (albeit unchanged beyond that). The forecast for core inflation was trimmed 0.1% for each year of the forecast (reaching but no longer exceeding the 2% target). Growth is still expected to be strong enough next year to edge the unemployment rate lower, before beginning a gradual modest rise beyond that (albeit remaining below the median estimate of the natural rate, though that edged down 0.1%, suggesting they judge the labor market overshoot to be a shade smaller).

Finally, in a purely technical move, with no policy import, the Fed raised the interest rate paid on reserves by just 20 basis points, to 2.40%, 10 basis points below the top of the federal funds rate target range, the better to ensure that the funds rate trades within that range, rather than near the upper end, as has been the case of late.

I continue to expect the Fed balance sheet to run off passively in the background, according to the schedule the Fed laid out more than a year ago. The federal funds rate will remain the primary active tool used to adjust the stance of policy. That is, the first line of response to changes in the outlook will be changes in the funds rate path. Barring a shock, I expect the balance runoff to continue into early 2020 or so, by which time about \$1 trillion of securities will have been shed cumulatively (about 2/3 Treasuries), leaving the Fed with still a bit more than \$3 trillion. That will take reserve balances down to about \$1 trillion or so, and if the Fed judges that to be roughly what banks want to hold, they will stop the runoff. The key driver of when the runoff stops – barring a shock where the Fed has to go back into "all hands on deck rate slashing/balance sheet expanding" mode again – is when the Fed judges reserve levels to be in line with banks' demand.

As for markets, I am not sure why they would suddenly focus on balance sheet runoff as a concern as this plan has been known about for over a year, and has proceeded methodically. And when it is all over, the Fed will likely still end up holding a lot more securities than suggested by pre-crisis trends.

As for the federal funds rate, I think the Fed will hold steady for a while, waiting for greater clarity on how the tug of war between still-sound economic fundamentals and the tightening of financial conditions plays out. Also, with the federal funds rate now back at least within the range of estimates of neutral, and inflation in check, policymakers can afford to be patient. But when the dust settles, we still expect the economy to perform in a way that induces the Fed to raise rates modestly further.

## Glossary

### Accommodative

The aim of an **accommodative** monetary policy is to support the economy by means of monetary expansion.

### Balance sheet

A **balance sheet** summarizes a company's assets, liabilities and shareholder equity.

### Basis point

One **basis point** equals 1/100 of a percentage point.

### Federal funds rate

The **federal funds rate** is the interest rate, set by the Fed, at which banks lend money to each other, usually on an overnight basis.

### Federal Open Market Committee (FOMC)

The **Federal Open Market Committee (FOMC)** is the committee that oversees the open-market operations (purchases and sales of securities that are intended to steer interest rates and market liquidity) of the U.S. Federal Reserve.

### Gross domestic product (GDP)

The **gross domestic product (GDP)** is the monetary value of all the finished goods and services produced within a country's borders in a specific time period.

### Inflation

**Inflation** is the rate at which the general level of prices for goods and services is rising and, subsequently, purchasing power is falling.

### Monetary policy

**Monetary policy** focuses on controlling the supply of money with the ulterior motive of price stability, reducing unemployment, boosting growth, etc. (depending on the central bank's mandate).

### U.S. Federal Reserve Board (the Fed)

The **U.S. Federal Reserve Board**, often referred to as "**the Fed**", is the central bank of the United States.

## Risk warning

Investments are subject to investment risk, including market fluctuations, regulatory change, possible delays in repayment and loss of income and principal invested. The value of investments can fall as well as rise and you might not get back the amount originally invested at any point in time.

Investments in Foreign Countries – Such investments may be in countries that prove to be politically or economically unstable. Furthermore, in the case of investments in foreign securities or other assets, any fluctuations in currency exchange rates will affect the value of the investments and any restrictions imposed to prevent capital flight may make it difficult or impossible to exchange or repatriate foreign currency.

Foreign Exchange/Currency – Such transactions involve multiple risks, including currency risk and settlement risk. Economic or financial instability, lack of timely or reliable financial information or unfavorable political or legal developments may substantially and permanently alter the conditions, terms, marketability or price of a foreign currency. Profits and losses in transactions in foreign exchange will also be affected by fluctuations in currency where there is a need to convert the product's denomination(s) to another currency. Time zone differences may cause several hours to elapse between a payment being made in one currency and an offsetting payment in another currency. Relevant movements in currencies during the settlement period may seriously erode potential profits or significantly increase any losses.

High Yield Fixed Income Securities – Investing in high yield bonds, which tend to be more volatile than investment grade fixed income securities, is speculative. These bonds are affected by interest rate changes and the creditworthiness of the issuers, and investing in high yield bonds poses additional credit risk, as well as greater risk of default.

Hedge Funds – An investment in hedge funds is speculative and involves a high degree of risk, and is suitable only for “Qualified Purchasers” as defined by the US Investment Company Act of 1940 and “Accredited Investors” as defined in Regulation D of the 1933 Securities Act. No assurance can be given that a hedge fund's investment objective will be achieved, or that investors will receive a return of all or part of their investment.

Commodities – The risk of loss in trading commodities can be substantial. The price of commodities (e.g., raw industrial materials such as gold, copper and aluminium) may be subject to substantial fluctuations over short periods of time and may be affected by unpredicted international monetary and political policies. Additionally, valuations of commodities may be susceptible to such adverse global economic, political or regulatory developments. Prospective investors must independently assess the appropriateness of an investment in commodities in light of their own financial condition and objectives. Not all affiliates

or subsidiaries of Deutsche Bank Group offer commodities or commodities-related products and services.

Investment in private equity funds is speculative and involves significant risks including illiquidity, heightened potential for loss and lack of transparency. The environment for private equity investments is increasingly volatile and competitive, and an investor should only invest in the fund if the investor can withstand a total loss. In light of the fact that there are restrictions on withdrawals, transfers and redemptions, and the Funds are not registered under the securities laws of any jurisdictions, an investment in the funds will be illiquid. Investors should be prepared to bear the financial risks of their investments for an indefinite period of time.

Investment in real estate may be or become nonperforming after acquisition for a wide variety of reasons. Nonperforming real estate investment may require substantial workout negotiations and/ or restructuring.

Environmental liabilities may pose a risk such that the owner or operator of real property may become liable for the costs of removal or remediation of certain hazardous substances released on, about, under, or in its property. Additionally, to the extent real estate investments are made in foreign countries, such countries may prove to be politically or economically unstable. Finally, exposure to fluctuations in currency exchange rates may affect the value of a real estate investment.

Structured solutions are not suitable for all investors due to potential illiquidity, optionality, time to redemption, and the payoff profile of the strategy. We or our affiliates or persons associated with us or such affiliates may: maintain a long or short position in securities referred to herein, or in related futures or options, purchase or sell, make a market in, or engage in any other transaction involving such securities, and earn brokerage or other compensation. Calculations of returns on the instruments may be linked to a referenced index or interest rate. In such cases, the investments may not be suitable for persons unfamiliar with such index or interest rates, or unwilling or unable to bear the risks associated with the transaction. Products denominated in a currency, other than the investor's home currency, will be subject to changes in exchange rates, which may have an adverse effect on the value, price or income return of the products. These products may not be readily realizable investments and are not traded on any regulated market.
